Guide to Research Techniques in Neuroscience Matt Carter, Jennifer C. Shieh, 2015-02-27 Neuroscience is by definition a multidisciplinary field some scientists study genes and proteins at the molecular level while others study neural circuitry using electrophysiology and high resolution optics A single topic can be studied using techniques from genetics imaging biochemistry or electrophysiology Therefore it can be daunting for young scientists or anyone new to neuroscience to learn how to read the primary literature and develop their own experiments This volume addresses that gap gathering multidisciplinary knowledge and providing tools for understanding the neuroscience techniques that are essential to the field and allowing the reader to design experiments in a variety of neuroscience disciplines Written to provide a hands on approach for graduate students postdocs or anyone new to the neurosciences Techniques within one field are compared allowing readers to select the best techniques for their own work Includes key articles books and protocols for additional detailed study Data analysis boxes in each chapter help with data interpretation and offer guidelines on how best to represent results Walk through boxes guide readers step by step through experiments

Receptor Biology Michael S. Roberts, Anne E. Kruchten, 2016-05-02 Dieses verständlich geschriebene Lehrbuch ist nicht nur hoch informativ sondern macht die komplexe Thematik der Signalwege von Rezeptoren leichter greifbar Es eignet sich perfekt für Kurse zu diesem Fachgebiet in den Studiengängen Biologie Medizin oder Pharmakologie Route Maps in Gene Technology Mark Walker, Ralph Rapley, 2009-07-17 Route Maps in Gene Technology is an exciting new introductory textbook for first year undergraduates in molecular biology and molecular genetics The subject is broken down into 140 to 150 key concepts or topics each of which is dealt with in one doublepaged spread These range from basic introductory principles to applied topics at the cutting edge of research A control strip along the top of the page shows the student which pages need to have been read beforehand and which topics may be followed afterward In addition at the front of the book are a selection of routes which the student or teacher may choose in order to study a particular topic Because courses have become more modular and many students arrive at college with little or no biology background this approach enables teachers and students to structure a course of study to best suit their disparate exposure to biology An exciting new concept in textbook design allowing unparalleled flexibility on the part of the student and the teacher Covers the full range of modern molecular biology from basic principles to the latest applications Attractive clear and simple presentation with copious two colour illustrations *Fast Variables in Stochastic Population Dynamics* George William Albert Constable, 2015-07-25 In this thesis two variants of the fast variable elimination method are developed They are intuitive simple to implement and give results which are in very good agreement with those found from numerical simulations The relative simplicity of the techniques makes them ideal for applying to problems featuring demographic stochasticity for experts and non experts alike Within the context of mathematical modelling fast variable elimination is one of the central tools with which one can simplify a multivariate problem When used in the context of deterministic systems the theory is quite standard but when stochastic effects are present it becomes less straightforward to apply While the introductory and background chapters form an excellent primer to the theory of stochastic population dynamics the techniques developed can be applied to systems exhibiting a separation of timescales in a variety of fields including population genetics ecology and epidemiology

Not by Design John Reiss, 2009-08-10 More than two centuries ago William Paley introduced his famous metaphor of the universe as a watch made by the Creator For Paley the exquisite structure of the universe necessitated a designer Today some 150 years since Darwin s *On the Origin of Species* was published the argument of design is seeing a revival This provocative work tells how Darwin left the door open for this revival and at the same time argues for a new conceptual framework that avoids the problematic teleology inherent in Darwin s formulation of natural selection In a wide ranging discussion of the historical and philosophical dimensions of evolutionary theory from the ancient

Greeks to today John Reiss argues that we should look to the principle of the conditions for existence first formulated before On the Origin of Species by the French paleontologist Georges Cuvier to clarify the relation of adaptation to evolution Reiss suggests that Cuvier's principle can help resolve persistent issues in evolutionary biology including the proper definition of natural selection the distinction between natural selection and genetic drift and the meaning of genetic load Moreover he shows how this principle can help unite diverse areas of biology ranging from quantitative genetics and the theory of the levels of selection to evo devo ecology physiology and conservation biology

Functional Polymers in Food Science Giuseppe Cirillo, Umile Gianfranco Spizzirri, Francesca Iemma, 2015-03-09 Polymers are an important part in everyday life products made from polymers range from sophisticated articles such as biomaterials to aerospace materials One of the reasons for the great popularity exhibited by polymers is their ease of processing Polymer properties can be tailored to meet specific needs by varying the atomic composition of the repeat structure by varying molecular weight and by the incorporation via covalent and non covalent interactions of an enormous range of compounds to impart specific activities In food science the use of polymeric materials is widely explored from both an engineering and a nutraceutical point of view Regarding the engineering application researchers have discovered the most suitable materials for intelligent packaging which preserves the food quality and prolongs the shelf life of the products Furthermore in agriculture specific functionalized polymers are used to increase the efficiency of treatments and reduce the environmental pollution In the nutraceutical field because consumers are increasingly conscious of the relationship between diet and health the consumption of high quality foods has been growing continuously Different compounds e g high quality proteins lipids and polysaccharides are well known to contribute to the enhancement of human health by different mechanisms reducing the risk of cardiovascular disease coronary disease and hypertension This second volume focuses on the importance of polymers and functional food and in food processing
