

Evidence: Morphology - Homologous Structures

Carefully examine the drawings of forelimb skeletons shown in Figure 1

Look for similarities in the bones amongst the various animals.

1. Observe each of the skeletons again, and describe the function of each limb on your paper.

Animal	Function of the Limb
Human	Manipulate/Grab
Cat	Walk
Whale	Steer
Bat	Flap/Fly

2. Are the functions of the limbs of each of the animals illustrated the same or different?

-All of these limbs can be used to manipulate the world around them but all in their own way. For humans it is grabbing, for cats it is walking, for whales it is steering, and for bats it is flying. The basic structures are the same but the dimensions and placements are what make the differences.

3. Are the bones of the limbs arranged in a similar or in a very different way in each animal?

-In general, these bones are arranged in a linear pattern. But, when looking at the phalanges of these limbs, for example, the spacing is different in each one. In some limbs, they are spread out while in others, they are close together.

4. Offer a possible evolutionary explanation for how the skeletons can be similar but the functions are very different in each of the animals.
