To power a hydroelectric system, two reservoirs having elevations that produce a constant pressure gradient. The water flows through a turbine, which converts the pressure gradient into mechanical work. The turbine is connected to a generator, which converts the mechanical work into electrical energy. The system is shown in the diagram below.

Diagram: A schematic diagram of a hydroelectric system. It shows two reservoirs at different elevations. Water flows from the higher reservoir through a turbine, which is connected to a generator. The turbine and generator are shown as a single unit. The water then flows back into a lower reservoir. The pressure gradient is indicated by a vertical line with arrows pointing downwards.

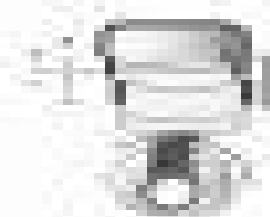

Diagram of a hydroelectric turbine and generator unit.
