
Chapter 3: Answers to Questions and Problems

1.

- a. When $P = \$12$, $R = (\$12)(1) = \12 . When $P = \$10$, $R = (\$10)(2) = \20 . Thus, the price decrease results in an \$8 increase in total revenue, so demand is elastic over this range of prices.
- b. When $P = \$4$, $R = (\$4)(5) = \20 . When $P = \$2$, $R = (\$2)(6) = \12 . Thus, the price decrease results in an \$8 decrease total revenue, so demand is inelastic over this range of prices.
- c. Recall that total revenue is maximized at the point where demand is unitary elastic. We also know that marginal revenue is zero at this point. For a linear demand curve, marginal revenue lies halfway between the demand curve and the vertical axis. In this case, marginal revenue is a line starting at a price of \$14 and intersecting the quantity axis at a value of $Q = 3.5$. Thus, marginal revenue is 0 at 3.5 units, which corresponds to a price of \$7 as shown below.

Managerial Economics Chapter 3 Answers:

Managerial Economics Sadananda Prusty, 2010 **Managerial Economics** Robert Waschik, Tim Fisher, David Prentice, 2010-06-10 Traditional microeconomic theory has much to offer a manager. It suggests ways to increase profits by setting prices and packaging services using advertising to increase demand and shows how internet auction sites like eBay affect competition and profitability. By using game theory to present and solve a manager's decision making problems and by focusing on the strategic nature of these problems, this text makes microeconomic theory much more intuitive and relevant for the business student. This book will be suitable for any student with a background of introductory economics. The authors include a variety of international examples and case studies from the business world to expand and illustrate key concepts and provide end of chapter exercises to test students' grasp of the material. An online supplement comprising of problems and solutions as well as PowerPoint slides is available for lecturers.
