

From the topic The Ten Principles of Economics, I have learned the origin of the word economy, which is the Greek word "oikonomos" meaning one who manages the household and how similar an economy is to a household. I have learned that scarcity is the foundation of economics and that Economics is the study of managing resources to satisfy society's unlimited wants.

Furthermore, I have also learned to identify the fundamental principles that govern the study of Economics which is the Ten Principles of Economics which is also group into three categories which are How People Make Decisions, How People Interact with One Another, and How The Economy Works. The ten principles are:

1. People Face Trade-Offs
2. The cost of something is what you give up to get it
3. Rational people think at the margin
4. People respond to incentives
5. Trade can make everyone better off
6. Markets are usually a good way to organize economics activity
7. Government can sometimes improve market outcomes
8. A country's standard of living depends on its ability to produce goods and services
9. Prices rise when the government prints too much money
10. Society faces a short-run trade-off between inflation and unemployment

Upon learning about the ten principles, I have also understood what each principle entails. From this point on, I will point out all that I have learned from each principle.

How People Make Decisions

1. People Face Trade-Offs

- This principle is born because of scarcity. It highlights that people face different kinds of trade-offs everyday wherein they are put in a position of having to choose between two options.
- Trade-offs allow for better understanding of options which lead to better decisions
- There is always conflict between Efficiency and Equality which Economics try to balance out
 - Efficiency means getting the most benefit from scarce resources while;
 - Equality means that benefits are distributed uniformly among society's members

2. The cost of something is what you give up to get it

- This principle highlights the concept of opportunity cost which is what must be given up in order to obtain something
- There are two types of opportunity cost:
 - Implicit is a non-monetary cost while;
 - Explicit costs are monetary costs

The (Pre-)dawning Of Functional Specialization In Physics Terrance J Quinn, 2017-03-14 In modern physics various fundamental problems have become topics of ongoing debate There was the 20th century climb to a Standard Model still accurate at the highest energy levels obtainable so far But since the 1970 s a different approach to physics advocates for theories such as string theory known for their mathematical elegance even though they either cannot be verified in data or contradict presently known experimental results In philosophy of physics there is a gradually emerging consensus that philosophy of physics and physics somehow contribute to a common enterprise But there is little sign of progress toward consensus about the nature of that unity All the while it is generally recognized that physics is interdisciplinary There are of course differences in focus But implicitly at least there are no sharp dividing lines between physics and philosophy of physics pure and applied physics physical chemistry biophysics medical physics history and philosophy of physics physics and society physics education and so on What then is progress in physics The question here is not about ideal structures but asks about what is going on in physics Beginnings in discerning the presence of eight main tasks help reveal the pre emergence of a normative omni disciplinary basis for collaboration that once adverted to promises to be constitutive of a new and increasingly effective control of meaning Originally discovered by Bernard Lonergan

in 1965 progress in the new collaboration will not seek to eliminate specialized expertise It will though divide tasks within an eightfold functional division of labor This book invites attention to data for each of the eight main tasks evident and self evident in existing scholarship in the community The book also makes preliminary efforts toward envisioning something of what functional collaboration will look like in physics the Academy and Society *Is Fiscal Policy the Answer?* Blanca Moreno-Dodson,2012-11-15 The effects of fiscal policy measures both taxes and public spending adopted by developing countries in response to the 2009 global crisis are still uncertain This book discusses them using an analytical framework that allows for distilling possible implications on growth and social welfare **Study Guide, Brief Principles of**

Durlauf, Karla Hoff, 2016-05-31 Much popular belief and public policy rests on the idea that those born into poverty have it in their power to escape But the persistence of poverty and ever growing economic inequality around the world have led many economists to seriously question the model of individual economic self determination when it comes to the poor In Poverty Traps Samuel Bowles Steven Durlauf Karla Hoff and the book's other contributors argue that there are many conditions that may trap individuals groups and whole economies in intractable poverty For the first time the editors have brought together the perspectives of economics economic history and sociology to assess what we know and don't know about such traps Among the sources of the poverty of nations the authors assign a primary role to social and political institutions ranging from corruption to seemingly benign social customs such as kin systems Many of the institutions that keep nations poor have deep roots in colonial history and persist long after their initial causes are gone Neighborhood effects influences such as networks role models and aspirations can create hard to escape pockets of poverty even in rich countries Similar individuals in dissimilar socioeconomic environments develop

different preferences and beliefs that can transmit poverty or affluence from generation to generation The book presents evidence of harmful neighborhood effects and discusses policies to overcome them with attention to the uncertainty that exists in evaluating such policies **Sm Macro/Micro 2e Canadian** N.
