The clutch pedal free travel can be adjusted to specification by changing the location of the E ring. The E ring has been marked with one of the 18 grooves provided at the center cap that is located at the upper end of the outer wire of the clutch release cable. Carry out the adjustment as follows:

Fig. 1-4: Clutch Pedal Free Travel Adjustment (1)

- (1) Working from the engine compartment, pull the upper end of the clutch release cable by your hand, until a resistance is felt (i.e. until the front part of the metal ball bearing of the clutch release hub contacts the clutch diaphragm spring.)
- (2) Count the sum of the grooves and wires that are now between the E ring inserted into the cable inner cap and the edge of the clutch wire support flange at the dash panel. The clutch pedal free travel adjustment is correct, if this sum of grooves and wires ranges from five (5) to six (6). If the adjustment is incorrect, change the location of the E ring so as to obtain the specified total number of five (5) to six (6).
- (3) Sitting at the driver's seat, depress the clutch pedal several times. Check to see if the clutch pedal free travel conforms to specification.

Specified Free Travel:

11 to 20 mm
