La póliza de reembolso de gastos médicos Maximiliano Arango Grajales,2025-06-25 La póliza de reembolso de gastos médicos es un producto de seguros que busca democratizar el riesgo de gasto de bolsillo en salud en un amplio número de unidades de riesgo. Es sin lugar a duda un seguro de corte patrimonial. Siempre que la aseguradora se comprometa al actualizarse el riesgo al pago de una suma de dinero por cuenta objetiva de los servicios de atención médica que de otra forma tendrían que ser asumida directamente por el paciente asegurado se está en presencia de una póliza patrimonial de gastos de bolsillo en salud. Aunque existen puntos de contacto esta especial póliza de reembolso de gastos médicos difiere de las pólizas de salud propiamente. Entender a la póliza de reembolso de gastos médicos como un producto de linaje patrimonial distinto de los seguros de salud permitir no solamente combatir argumentativamente hablando a las intromisiones normativas que no tienen lugar sino también establecer con precisión el marco de acción frente a las entidades de vigilancia y control administrativo y judicial. Sin lugar a equivocarse por demás la claridad en el panorama fomentar que el gremio asegurador expanda este especial producto de seguros a escenarios donde se requiere urgentemente.

Scientific and Technical Aerospace Reports ,1965 *Architecture Exploration for Embedded Processors with LISA* Andreas Hoffmann, Heinrich Meyr, Rainer Leupers, 2013-06-29 Already today more than 90% of all programmable processors are employed in embedded systems. This number is actually not surprising contemplating that in a typical home you might find one or two PCs equipped with high of embedded systems performance standard processors but probably dozens including electronic entertainment household and telecom devices each of them equipped with one or more embedded processors. Moreover the electronic components of upper class cars incorporate easily over one hundred processors. Hence efficient embedded processor design is certainly an area worth looking at. The question arises why programmable processors are so popular in embedded system design. The answer lies in the fact that they help to narrow the gap between chip capacity and designer productivity. Embedded processors cores are nothing but one step further towards improved design reuse just along the lines of standard cells in logic synthesis and macrocells in RTL synthesis in earlier times of IC design. Additionally programmable processors permit to migrate functionality from hardware to software resulting in an even improved reuse factor as well as greatly increased flexibility.
