It is a compact to the point manual offering a large amount of information. This translation of the Spanish second edition is aimed at all those who use Kinesiology or other forms of testing such as the pendulum and the tensor in their therapeutic work as a consultation tool. The intention of this book is to provide a work manual to help facilitate testing sessions notwithstanding that each professional already has their working procedures. We hope you will find this book useful and enjoyable.

Programas de Acondicionamiento Neuromuscular en situaciones con requerimientos específicos

Iván Chulvi Medrano, 2017-08-31 Para contextualizar el presente libro debe ser desarrollado el concepto situaciones con requerimientos específicos La aplicación de este concepto ha sido sugerida por Heredia 2005 con el fin de obviar el extendido concepto de poblaciones especiales el cual puede poseer connotaciones peyorativas hacia la persona que es etiquetada de tal forma La utilización del término situaciones con requerimientos específicos pretende aportar un punto de vista menos excluyente donde se conceptualiza la necesidad de adecuación del ejercicio físico que requiere cualquier persona El concepto requerimientos específicos en este manual agrupa cuatro grandes grupos a Diferentes situaciones biológicas b Alteraciones cardiovasculares y respiratorias c Alteraciones metabólicas d Alteraciones del aparato locomotor Puede entenderse que exista un quinto grupo el cual englobaría a las diferentes alteraciones ortopedicas y/o posturales tales como escoliosis síndrome del túnel carpiano alteraciones del manguito rotador etc Sin embargo no han sido recogidos en el presente libro puesto que su tratamiento estará supeditado a la competencia de los rehabilitadores y fisioterapeutas

Aunque no debe perderse de vista el papel importante que cubren los programas progresivos contra resistencias en la rehabilitación Taylor et al 2005 Andersen et al 2006 El presente texto aborda la prevención y el tratamiento de algunas situaciones con requerimientos específicos mediante la aplicación de programas de acondicionamiento neuromuscular Tradicionalmente y sobretodo debido a la conocida publicación Aerobics del doctor Cooper el ejercicio cardiovascular ha sido considerado pieza clave para la salud integral de las personas No obstante debemos tener presente que uno de los aspectos de la salud física incluye el sistema musculoesquelético Feigenbaum y Pollock 1999 Kell et al 2001 y por tanto el entrenamiento contra resistencias puede incrementar la salud del practicante Hurley 1994 En la literatura ha sido descrito ampliamente la especificidad del ejercicio físico lo que significa que el ejercicio aeróbico lidera unas adaptaciones crónicas específicas que son muy difíciles o imposible de conseguir mediante otra forma de entrenamiento Este principio de especificidad también es encontrado en los programas de acondicionamiento neuromuscular Morrissey et al 1995 De la misma forma las adaptaciones crónicas conseguidas por medio de un programa de entrenamiento contra resistencias resulta muy complicado de conseguir por otro medio como resulta el entrenamiento cardiovascular para una mayor revisión acudir a Knuttgen 2007 La mejora del estatus musculoesquelético incrementa el estado global de salud y el rendimiento ante las actividades de la vida cotidiana y con ello la calidad de vida Kell et al 2001 Warburton et al 2006 Esta aseveración está siendo confirmada gracias a recientes investigaciones donde los programas contra resistencias han mostrado su importancia como una herramienta más para la mejora de la calidad de vida Tal es la importancia del estado del sistema neuromuscular que incluso algunos componentes de la aptitud muscular principalmente resistencia muscular abdominal puede resultar un factor predictivo de mortalidad Katzmarzyk y Craig 2002 aunque es una relación sobre la que existe poca literatura además los resultados del citado estudio de Katzmarzyk y Craig 2002 fue llevado a cabo en Canadá y por tanto resultando una muestra específica Recientemente Willardson y Tudor Locke 2005 han realizado una revisión de la cual se desprende que de los estudios recopilados existe una relación inversa entre el estatus muscular realizado solo con algunas pruebas y la mortalidad existiendo desconocimiento sobre los posibles mecanismos que pueden provocar esta profilaxis La citada recopilación sugiere que los manifestaciones de resistencia a la fuerza genera mayor componente protector entre el sector femenino mientras que la potencia realiza dicha función principalmente entre los varones En este mismo sentido cabe destacar que la manifestación de la resistencia a la fuerza está asociada de forma positiva sobre estatus funcional de personas de edad avanzada Hughes et al 2002 A raíz de estos conocimientos que relacionan de forma proporcional el estatus neuromuscular con la calidad de vida el Colegio Americano de Medicina Deportiva ACSM 1990 incluyó en su posicionamiento de 1990 el entrenamiento contra resistencias pudiendo ser considerado el punto de inflexión en lo que al entrenamiento contra resistencias bajo el prisma saludable se refiere A partir de ese momento ha existido una corriente investigadora que se ha preocupado por registrar los efectos preventivos y o terapéuticos que un programa de acondicionamiento

neuromuscular puede aportar para la salud de quienes lo practican *Enfermedades y Trastornos de La Salud* Neil
