Cucinotta,Jay S. Loeffler,2018-01-31 High energy charged particles represent a cutting edge technique in radiation oncology Protons and carbon ions are used in several centers all over the world for the treatment of different solid tumors Typical indications are ocular malignancies tumors of the base of the skull hepatocellular carcinomas and various sarcomas The physical characteristics of the charged particles Bragg peak allow sparing of much more normal tissues than it is possible using conventional X rays and for this reason all pediatric tumors are considered eligible for protontherapy Ions heavier than protons also display special radiobiological characteristics which make them effective against radioresistant and hypoxic tumors On the other hand protons and ions with high charge Z and energy HZE particles represent a major risk for human space exploration The main late effect of radiation exposure is cancer induction and at the moment the dose limits for astronauts are based on cancer mortality risk The Mars Science Laboratory MSL measured the dose on the route to Mars and on the planet s surface suggesting that a human exploration missions will exceed the radiation risk limits Notwithstanding many studies on carcinogenesis induced by protons and heavy ions the risk uncertainty remains very high In this research topic we aim at gathering the experiences and opinions of scientists dealing with high energy charged particles either for cancer treatment or for space radiation protection Clinical results with protons and heavy ions as well as research in medical physics and pre clinical radiobiology are reported In addition ground based and spaceflight studies on the effects of space radiation are included in this book Particularly relevant for space studies are the clinical results on normal tissue complications and second cancers The eBook nicely demonstrates that particle therapy in oncology and protection of astronauts from space radiation share many common topics and can learn from each other *The Pediatric and Perinatal Autopsy Manual with DVD-ROM* Marta C. Camps-Arbestain,Johannes Lehmann,2017-03-01 Interest in biochar among soil and environment researchers has increased dramatically over the past decade Biochar initially attracted attention for its potential to improve soil fertility and to uncouple the carbon cycle by storing carbon from the atmosphere in a form that can remain stable for hundreds to thousands of years Later it was found that biochar had applications in environmental and water science mining microbial ecology and other fields Beneficial effects of biochar and its environmental applications cannot be fully realised unless the chemical physical structural and surface properties of biochar are known Currently many of the analytical procedures used for biochar analysis are not well defined which makes it difficult to choose the right biochar for an intended use and to compare the existing data for biochars Also in some instances the use of inappropriate procedures has led to erroneous or inaccurate values for biochars in the scientific literature Biochar A Guide to Analytical Methods fills this gap and provides procedures and guidelines for routine and advanced characterisation of biochars Written by experts each chapter provides background to a technique or procedure a stepwise guide to analyses and includes data for biochars made from a range of feedstocks common to all presented methods Discussion about the unique features advantages and disadvantages of a particular technique is an explicit focus of this handbook for biochar analyses Biochar is primarily intended for researchers postgraduate students and practitioners who require knowledge of biochar properties It will also serve as an important resource for researchers industry and regulatory agencies dealing with biochar
