### A Complete Classification of the Isolated Singularities for Nonlinear Elliptic Equations with Inverse Square Potentials

Florica C. Cîrstea, 2014-01-08 In particular for  $b \neq 0$  we find a sharp condition on  $h$  such that the origin is a removable singularity for all non negative solutions of  $\Delta u = h(x)|u|^{p-2}u$  thus addressing an open question of Vazquez and Vron

### *Operator-Valued Measures, Dilations, and the Theory of Frames* Deguang Han, David R. Larson, Bei Liu, Rui

Liu, 2014-04-07 The authors develop elements of a general dilation theory for operator valued measures Hilbert space operator valued measures are closely related to bounded linear maps on abelian von Neumann algebras and some of their results include new dilation results for bounded linear maps that are not necessarily completely bounded and from domain algebras that are not necessarily abelian In the non cb case the dilation space often needs to be a Banach space They give applications to both the discrete and the continuous frame theory There are natural associations between the theory of frames including continuous frames and framings the theory of operator valued measures on sigma algebras of sets and the theory of continuous linear maps between algebras In this connection frame theory itself is identified with the special case in which the domain algebra for the maps is an abelian von Neumann algebra and the map is normal i.e ultraweakly or weakly or w continuous

*Cognitive Communication and Cooperative HetNet Coexistence* Maria-Gabriella Di Benedetto, Faouzi Bader, 2014-01-16 This book written by experts from universities and major industrial research laboratories is devoted to the very hot topic of cognitive radio and networking for cooperative coexistence of heterogeneous wireless networks Selected highly relevant advanced research is presented on spectrum sensing and progress toward the realization of accurate radio environment mapping biomimetic learning for self organizing networks security threats with a special focus on primary user emulation attack and cognition as a tool for green next generation networks The research activities covered include work undertaken within the framework of the European COST Action IC0902 which is geared towards the definition of a European platform for cognitive radio and networks Communications engineers R D engineers researchers and students will all benefit from this complete reference on recent advances in wireless communications and the design and implementation of cognitive radio systems and networks

*Proof of the 1-Factorization and Hamilton Decomposition Conjectures* Béla Csaba, Daniela Kühn, Allan Lo, Deryk Osthus, Andrew Treglown, 2016-10-05 In this paper the authors prove the following results via a unified approach for all sufficiently large  $n$  i 1 factorization conjecture Suppose that  $n$  is even and  $D \geq n/4 + 1$  Then every  $D$  regular graph  $G$  on  $n$  vertices has a decomposition into perfect matchings Equivalently  $G$  has a Hamilton decomposition conjecture Suppose that  $D \geq n/2$  Then every  $D$  regular graph  $G$  on  $n$  vertices has a decomposition into Hamilton cycles and at most one perfect matching iii Optimal packings of Hamilton cycles Suppose that  $G$  is a graph on  $n$  vertices with minimum degree  $\geq n/2$  Then  $G$  contains at least  $\lfloor n/2 \rfloor$  edge disjoint Hamilton cycles Here  $\lfloor n/2 \rfloor$  denotes the degree of the largest even regular spanning subgraph one can guarantee in a graph on  $n$  vertices with minimum degree  $\geq n/2$  i was first explicitly stated

Payne,James Schlesinger,2016-04-14 The National Institute for Public Policy s new book Minimum Deterrence Examining the Evidence is the first of its kind Dr Keith Payne former Secretary of Defense James Schlesinger and an unparalleled bipartisan group of senior civilian and military experts critically examine eight basic assumptions of Minimum Deterrence against available evidence In general Minimum Deterrence does not fare well under the careful scrutiny Proponents of a Minimum Deterrent US nuclear force posture believe that anywhere from a handful to a few hundred nuclear weapons are adequate to

deter reliably and predictably any enemy from attacking the United States now and in the future Because nuclear weapons are so destructive their thinking goes no foreign leader would dare challenge US capabilities The benefits advocates claim of reducing US nuclear weapons to the minimum level needed are better relations with Russia and China reinforcement of the arms control and Nonproliferation Treaty billions of defense dollars in savings and greater international stability on the way to nuclear zero As political pressure builds to pursue this vision of minimum US deterrence Minimum Deterrence Examining the Evidence stands as the seminal study to address the many claims of great benefit using available evidence This book was published as a special issue of Comparative Strategy
