

PROPOSED SYSTEM

This proposed system consists of following components:

1. **Data Preparation (MER1):** Data Preparation, Figure 1, is the step of downloading the data from Cassandra servers to the corresponding file systems – HDFS for Hadoop Streaming and the shared file system for MAPREDUCE. For both of these frameworks this step is initiated in parallel. Cassandra allows exporting the records of a dataset in JSON formatted files [9]. Using this feature, each node downloads the data from the local Cassandra server to the file system. In our experimental setup, each node that is running a Cassandra server is also a worker node for the Map Reduce framework in use.
2. **Data Transformation (MER2):** Cassandra allows users to export datasets in JSON formatted files. As our assumption is that the Map Reduce applications to be run are legacy applications which are either infeasible or impractical to be modified and the input data needs to be converted into a format which is expected by these target executables. For this reason, our software pipeline includes a Map Reduce step, Figure 2, where JSON data can be transformed into other formats. In this phase each node record is processed to be converted to another format and stored in intermediary output files. This step does not involve any data or processing dependencies between nodes and therefore is a good fit for the Map Reduce.
3. **Data Processing (MER3):** This is the final step of the Map Reduce framework. Here we run the non-java executables, over the output of MER2.

To show the full operation, we assume the time taken for Data Preparation and Data Transformation, under each MapReduce framework and repeat our comparisons[1].

Figure 1: Block Diagram of Proposed System

CONCLUSION

NoSQL databases or new tools using Cassandra with different hardware configurations, seeking improvements in performance. Comparing the performance of Cassandra to the Mongo DB database will definitely help in the processing of unstructured data. Further it is possible to outline new approaches in studies of processing the unstructured data.
