Sawhney, 2017 After it introduced the extremely successful Droid smartphone into the market in 2009 Motorola quickly moved to develop the next generation Droid 2 before the next wave of smartphones including the rumored iPhone 4 flooded the market The development process was moving smoothly for the company when Verizon its biggest partner dropped a bombshell It wasn't happy with the mechanical camera button on the Droid 2 citing customer feedback and wanted it to be changed to a software button like the iPhone's This request immediately placed Motorola in the proverbial horns of a dilemma On the one hand it couldn't brush away the request of its biggest and most important partner On the other hand changing the camera button now would mean delaying the Droid 2's entry into the market Should the Droid 2 team remove the camera's hardware button in favor of a software button per Verizon's request or not John Smith the product manager leads the cross functional Droid 2 team The case setting is an emergency war room meeting to address this critical issue just weeks prior to launch John's objective is to obtain the salient facts and opinions of team members quickly so he can make an informed recommendation to his boss by the end of the day He is concerned that this last minute request for a design change will not only threaten to delay the launch which would have significant financial implications but could potentially create deep fissures in a hitherto effective team that had been running like a well oiled machine The case puts students in a situation that simulates a real world discussion and allows them to experience what it is like as a product manager to orchestrate a meeting with cross functional teams that have conflicting priorities and agendas It illustrates the challenges a product manager faces while striving to make important decisions with little or no direct authority over the various teams After reading and analyzing this case students will be able to Experience the dynamics of cross functional teams in product management Practice running

effective and productive meetings Practice bringing together various personalities and points of view Understand the importance of setting goals and clear expectations Internalize the importance of building relationships and influencing teams even when you do not have direct authority

use around the world That s an incredible statistic The amazing thing is that Android s growth doesn t seem to be abating If anything Android is growing faster than ever Google has managed to halt the unstoppable behemoth that is Apple a company that demolished every established player in the field Now Android and iOS have split the playing field Android has thrived in a world that has seen Microsoft Blackberry Palm and Nokia fail And RIM is on the verge of defeat after managing to hold on thanks to its incredible BBM system Android has proven to be the only viable threat to Apple and Apple the only threat to Google It s no wonder that the two are locked in constant legal battles Now Android is entering a new era Google is pushing Android as a generic solution to any platform that needs a lightweight operating system positioning it to replace low end Linux devices We have seen Android put into cars into televisions and even into refrigerators But perhaps the most interesting use of Android comes from Google itself who is using the platform in its Project Glass Project Glass is one of the most ambitious initiatives of this decade an attempt to truly implement a wearable computing system We still know very little about the project but it could prove to be as disruptive as the original iPhone was In fact it might prove to be even more disruptive if Google gets the implements it properly Purpose This is an ebook about Android where it came from and why it has risen to a position of prominence among smartphone operating systems I ll look at the history of the platform from its first tentative steps to the modern day where Android devices are constantly on the cutting edge of technology I ll cover the implications of a world dominated by a freely distributed platform and delve into the issues raised by it There is much to cover but I will try my best to be brief Who am I and why am I qualified to write this I am a technology blogger I have followed Android s ascent to the throne seen its occasional missteps and heard all the criticisms I have used custom roms run alternate launchers and have replaced my homescreen I love Android for its customizability and its flexibility both of which are unmatched on any other platform I have run into the platform s limits and tried to push past them I have even developed for the platform So stick with me as we take this journey into the heart and mind of a platform that rejuvenated the open source movement EXCERPT FROM THE BOOK Then came Maps Navigation a completely free alternative that shipped with the phone GPS manufacturers were terrified by Google Maps Navigation and for good reason This was the beginning of the end for the industry and other industries began to wonder when Google was going to destroy them too Google Maps Navigation had many features that only came on the most advanced GPS devices of the time It featured a slick 3D view complete with the ability to layer satellite photography on top voice guidance including street names something that many other devices could only dream of and live traffic information
