Valentina Tamma,Stephen Cranefield,Timothy W. Finin,Steven Willmott,2006-03-30 There is a growing interest in the use of
ontologies for multi agent system app cations On the one hand the agent paradigm is successfully employed in those
applications where autonomous loosely coupled heterogeneous and distributed systems need to interoperate in order to
achieve a common goal On the other hand ontologies have established themselves as a powerful tool to enable kno edge
sharing and a growing number of applications have bene ted from the use of ontologies as a means to achieve semantic
interoperability among heterogeneous distributed systems In principle ontologies and agents are a match made in heaven
that has failed to happen What makes a simple piece of software an agent is its ability to communicate in a social
environment to make autonomous decisions and to be proactive on behalf of its user Communication ultimately depends on
und standing the goals preferences and constraints posed by the user Autonomy is
theabilitytoperformataskwithlittleornouserintervention whileproactiveness involves acting autonomously with no need for
user prompting Communication but also autonomy and proactiveness depend on knowledge The ability to c municate
depends on understanding the syntax terms and structure and the semantics of a language Ontologies provide the terms
used to describe a domain and the semantics associated with them In addition ontologies are often comp mented by some
logical rules that constrain the meaning assigned to the terms These constraints are represented by inference rules that can
be used by agents to perform the reasoning on which autonomy and proactiveness are based **Popular Mechanics**
