# STATES OF MATTER

## Complete Matter Unit

### What is Matter?

#### Definition:

- Matter: anything that has weight and takes up space.
- Solids: The solid state of matter.

#### What is matter?

Matter is what makes up everything around us. It is anything that has weight and takes up space. Matter can't be created or destroyed. Everything that we see is made up of matter. Even things you can't see like the air we breathe are made up of matter.

#### What makes up matter?

All matter is made up of atoms and molecules. Atoms and molecules are also called particles. An atom is the smallest part of matter. It is the building block that makes up all of the things around us. Matter can only be created or destroyed if it is broken down into its smallest parts. Atoms are held together by forces that are strong enough to hold us together with our feet.

Molecules are made up of a few atoms that are stuck together. They are larger than atoms and can be seen with a microscope. Atoms are held together by forces that are strong enough to hold us together with our feet. Molecules are held together by forces that are strong enough to hold us together with our feet.

Imagine building a house of Lego. The individual pieces of Lego are the particles. When you put them all together, you have the house. Matter is the house.
