Gender and Fair Assessment

Warren W. Willingham, Nancy S. Cole, 2013-12-16. There have been many important changes in the participation of women and men in American society over the past quarter century. Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men. They aid the learning process and reflect inequalities in opportunity to learn and participate. In addition, they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students, educational programs, and a wide range of issues. For all of these reasons, it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired. The test performance of women and men is a research topic of historical interest and has received much attention in recent years. Because of this increased interest, there is a great deal of new research and data available. The purpose of the study presented in this volume was to review this new information with two objectives in mind: to clarify patterns of gender difference and similarity in test performance and related achievements, and to see what implications those findings might have for fair assessment and, as a corollary, to examine the assessment process as a possible

source of gender differences This study is interested in tests used in education to assess developed knowledge and skill In order to gain a broader view of gender similarity and difference the contributors looked at other types of measures and other characteristics of young women and men Their hope is to contribute to a firmer basis for insuring fairness in tests an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience *Tests in Print* Oscar Krisen Buros,2006 Education and Equality Danielle Allen,2018-02-09 American education as we know it today guaranteed by the state to serve every child in the country is still less than a hundred years old It s no wonder we haven t agreed yet as to exactly what role education should play in our society In these Tanner Lectures Danielle Allen brings us much closer examining the ideological impasse between vocational and humanistic approaches that has plagued educational discourse offering a compelling proposal to finally resolve the dispute Allen argues that education plays a crucial role in the cultivation of political and social equality and economic fairness but that we have lost sight of exactly what that role is and should be Drawing on thinkers such as John Rawls and Hannah Arendt she sketches out a humanistic baseline that re links education to equality showing how doing so can help us reframe policy questions From there she turns to civic education showing that we must reorient education s trajectory toward readying students for lives as democratic citizens Deepened by commentaries from leading thinkers Tommie Shelby Marcelo Su rez Orozco Michael Rebell and Quiara Alegria Hudes that touch on issues ranging from globalization to law to linguistic empowerment this book offers a critical clarification of just how important education is to democratic life as well as a stirring defense of the humanities
