**Semiotic Approaches in Science Didactics** Catherine Houdement, Cécile de Hosson, Christophe Hache, 2022-09-21 The sciences are in essence highly semiotized Our ways of thinking and communicating about science are based on permanent transformations from one system of signs to another such as scriptural graphic symbolic oral and gestural signs The semiotic focus studied in this book makes it possible to grasp part of the complexity of teaching and learning phenomena by focusing on the variety of possible interpretations of the signs that circulate within the science classroom Semiotic Approaches in Science Didactics brings together contributions from didactic research involving various disciplines such as mathematics chemistry physics and geography which mobilize different types of semiotic support It offers the key to understanding and even reducing some of the misunderstandings that can arise between a speaker and a receiver in scientific teaching situations

**Thermomechanics of Continua** Krzysztof Wilmanski, 2012-12-06 The notion of continuum thermodynamics adopted in this book is primarily understood as a strategy for development of continuous models of various physical systems The examples of such a strategy presented in the book have both the classical character e.g. thermoelastic materials viscous fluids mixtures and the extended one ideal gases Maxwellian fluids thermoviscoelastic solids etc The latter has been limited intentionally to non relativistic models many important relativistic applications of the true extended thermodynamics will not be considered but can be found in the other sources The notion of extended thermodynamics is also adopted in a less strict sense than suggested by the founders For

instance in some cases we allow the constitutive dependence not only on the fields themselves but also on some derivatives. In this way the new thermodynamical models may have some features of the usual nonequilibrium models and some of those of the extended models. This deviation from the strategy of extended thermodynamics is motivated by practical aspects: frequently the technical considerations of extended thermodynamics are so involved that one can no longer see important physical properties of the systems. This book has a different form from that usually found in books on continuum mechanics and continuum thermodynamics. The presentation of the formal structure of continuum thermodynamics is not always as rigorous as a mathematician might anticipate and the choice of physical subjects is too diverse to make a physicist happy.

*Research in Education*, 1972      **Ebony**, 2000-11 EBONY is the flagship magazine of Johnson Publishing. Founded in 1945 by John H. Johnson, it still maintains the highest global circulation of any African American focused magazine.      **The Thermodynamics of Linear Fluids and Fluid Mixtures** Miloslav Pekař, Ivan Samohýl, 2013-11-19 In this book Samohýl and Pekař offer a consistent and general non-equilibrium thermodynamic description for a model of chemically reacting mixtures. This type of model is frequently encountered in practice and up until now chemically reacting systems out of equilibrium have rarely been described in books on non-equilibrium thermodynamics. Readers of this book benefit from the systematic development of the theory: this starts with general principles going through the applications to single component fluid systems and finishing with the theory of mixtures including chemical reactions. The authors describe the simplest mixture model: the linear fluid and highlight many practical and thermodynamically consistent equations for describing transport properties and reaction kinetics for this model. Further on in the book the authors also describe more complex models. Samohýl and Pekař take special care to clearly explain all methodology and starting axioms and they also describe in detail applied assumptions and simplifications. This book is suitable for graduate students in chemistry, materials science and chemical engineering as well as professionals working in these and related areas.      *Parliamentary Papers* Great Britain.
