- Observations are made by gathering information about events or processes. An inference is a logical interpretation based on prior knowledge or experience.
- A hypothesis is a proposed scientific explanation for a set of observations.
- The variable that is deliberately changed is called the **manipulated variable**. The variable that is observed and changes in response to the manipulated variable is called the **responding variable**.
- A control group is not exposed to the independent variable so that it can be used as comparison to the experimental data.

TYPES OF CELLS:

- **Prokaryotes:** simple cells that do not have a nucleus.

- Plants and animals are BOTH MADE FROM EUKARYOTIC CELLS

DNA:

- DNA is composed of nucleotides. The base component is universal in all organisms.
- A nucleotide has a phosphate group, a sugar and a nitrogenous base.
- Nitrogenous bases:
 - Adenine, Thymine, Cytosine and Guanine
 - Base pairing rule -
 - A \longleftrightarrow T
 - G \longleftrightarrow C

EVOLUTION:

NATURAL SELECTION

- **Natural Selection:** Organisms with favorable traits during their lifetime will breed and pass on their traits more than those who do not have them.
- **Evolution:** How organisms change over many generations.
- **MUTATION** happens during a single generation (just a gain/loss of a big molecule like weight lifting).

Tierney, 2015-11-01 How can new ways of thinking about education improve the lives of poor students In Rethinking Education and Poverty William G Tierney brings together scholars from around the world to examine the complex relationship between poverty and education in the twenty first century

International in scope this book assembles the best contemporary thinking about how education can mediate class and improve the lives of marginalized individuals In remarkably nuanced ways this volume examines education s role as both a possible factor in perpetuating and a tool for alleviating entrenched poverty Education has long been seen as a way out of poverty Some critics however argue that educational systems mask inequality and perpetuate cycles of poverty and wealth others believe that the innate resilience or intellectual ability of impoverished students is what allows those individuals to succeed Rethinking Education and Poverty grapples in turn with the ramifications of each possibility Throughout these compelling far reaching and provocative essays the contributors seek to better understand how local efforts to reduce poverty through education interact or fail to interact with international assessment efforts They take a broad historical view examining social economic and educational policies from the postWorld War II period to the end of the Cold War and beyond Although there is no simple solution to inequality this book makes clear that education offers numerous exciting possibilities for progress

Molecular Genetics and Emerging Therapies for Epithelial Ovarian Cancer: Basic Research and Clinical Perspectives Stergios Boussios, Eleftherios Pierre Samartzis, Nicholas Pavlidis, J. Alejandro Perez-Fidalgo, 2023-11-06 Epithelial ovarian cancer (EOC) is the most lethal gynecological disorder due to a lack of effective early detection strategies Worldwide approximately 230,000 women are diagnosed annually whereas 150,000 die It represents the seventh most commonly diagnosed cancer among women in the world with 5 year survival rate of 46% More than one fifth of EOC have been related to hereditary conditions Considerable efforts have been made to implement screening of the general population to diagnose EOC early nevertheless this has been ineffective and there is no approved strategy Nowadays new approaches for early diagnosis and prevention based on molecular genomics are in development Whole genome sequencing has established the potency of the somatic genome characterised with diverse DNA repair deficiencies that can be used to stratify EOCs into distinct biological groups with predictive signatures of resistance or relapse The incorporation of next generation sequencing (NGS) into clinical practice remains challenging for two reasons Firstly the EOC risk is not clear for some of the included genes and secondly the variant of uncertain significance rates increase as more genes are analyzed Finally beyond germline pathogenic variants somatic mutations may also affect therapeutic choices and as such upfront tumor sequencing may be equally important to NGS particularly as we continue to challenge treatment paradigms in the first line management of EOC
