

Graphing Other Rational Functions

All rational functions of the form $y = \frac{ax + b}{cx + d}$ also have graphs that are hyperbolas.

- The vertical asymptote of the graph is the line $x = -\frac{d}{c}$ because the function is undefined when the denominator $cx + d$ is zero. *value that makes the denom. zero*
- The horizontal asymptote is the line $y = \frac{a}{c}$.

EXAMPLE 1 Graphing a Rational Function of the Form $y = \frac{ax + b}{cx + d}$

Graph $f(x) = \frac{2x+1}{x-3}$. State the domain and range.

$$VA \quad x = \frac{-(-3)}{1} = 3 \quad D: x \neq 3$$

$$HA \quad y = \frac{2}{1} = 2 \quad R: y \neq 2$$

How To Graph Mixed Rationals:

Modeling Rational Agents Nicola Giocoli, 2003-01-01 This book explores the evolution through the first half of the 20th century of the key neoclassical concept of rationality The analysis begins with the development of modern decision theory covers the interwar debates over the role of perfect foresight and analyzes the first game theoretic solution concepts of von Neumann and Nash The author's proposition is that the notion of rationality suffered a profound transformation that reduced it to a formal property of consistency Such a transformation paralleled that of neoclassical economics as a whole from a discipline dealing with real economic processes to one investigating issues of logical consistency between mathematical relationships

A Mathematical Tour of Functions Jorge Alberto Calvo, 2013-07-29 Welcome to our mathematical tour The theme of this book centers around the concept of function a mathematical idea that has become increasingly important over the past two centuries In these pages you will read about many of the topics commonly covered in courses with impressive sounding titles like College Algebra Trigonometry and Precalculus It is my hope that after reading this book you will be prepared and perhaps even want to move on to a course in Calculus This book was originally written as a blueprint for a university level course satisfying the core curriculum and emphasizing the liberal arts identity at Ave Maria University

Hyperbolic Equations and Waves Marcel Froissart, 2013-11-11 The success of the 1967 Battelle Rencontres was so much appreciated by the participants and organizers of this experimental set up that it was soon decided to go on with the experiment Mathematicians and physicists had found a very suitable frame to overcome their natural shyness to get occasionally interested into each others work to talk 1968 Rencontres have about it and eventually to know each other The been organized with the same idea in mind and even somewhat enlarged in the following sense the topic chosen hyperbolic equations and waves has proved a cornerstone of physics for more than a century and extends over most fields of contemporary physics It follows immediately that the wide range of physicists concerned could not be represented by more than a couple of specialists in any single field Thus aside from bridging the gap between mathematicians and physicists the 1968 Rencontres provided a rather unique occasion to plug many intra disciplinary gaps among physicists This made the Rencontres quite unpredictable as to how people would and could interact and created a very stimulating environment for an unprecedented intellectual venture From the outside it may very well look like a hodge podge of quite unrelated ideas But it was much less so at the level of day to day discussions and informal gatherings where all slowly acquired a comprehensive synthetic view of the subject
