

INDEPENDENT VS DEPENDENT VARIABLES

INDEPENDENT

An independent variable is the factor in an experiment that the researcher intentionally manipulates or changes to observe its effect. It's considered the cause or reason for an observed effect. Any changes in the dependent variable are hypothesized to be directly caused by variations in the independent variable.

DEPENDENT

The dependent variable is what the researcher measures to see if it changes as a result of the manipulation of the independent variable. It represents the outcome or effect in an experiment. Changes in the dependent variable are considered to be dependent on variations in the independent variable.
