Industrial Buildings Design Manual:

Industrial Buildings Jürgen Axel Adam, Katharina Hausmann, Frank Jüttner, Klaus Daniels, 2004-12-31 Building structures to house the logistical and manufacturing processes of industry is one of the largest and most widespread architectural assignments. The complex functional requirements are often fulfilled by typified or modular solutions. The organization of industrial processes together with the wide range of designs and building methods are clearly and practically treated in this design atlas. A systematic section presents the typology, the technical and logistical elements of industrial building. In the subsequent section, some 70 designs are described and analysed. Special emphasis is placed on those functions and procedures that inform the design, such as production, montage, storage and distribution. Jürgen Adam is Director of the Institute for Design and Construction at the University of Stuttgart. As an architect and teacher, he has followed closely developments in international industrial building, as have the contributing authors, among others Gunther Henn, Klaus Daniels and Fritz Haller. **Industrial Buildings**, 1938 *Design Manual, Mechanical Engineering* United States.
