Goodfellow, Esko Tahti, 2001-04-17 The Industrial Ventilation Design Guidebook addresses the design of air technology systems for the control of contaminants in industrial workplaces such as factories and manufacturing plants. It covers the basic theories and science behind the technical solutions for industrial air technology and includes publication of new fundamental research and design equations contributed by more than 40 engineers and scientists from over 18 countries. Readers are presented with scientific research and data for improving the indoor air quality in the workplace and reducing emissions to the outside environment. The Guidebook represents for the first time a single source of all current scientific information available on the subject of industrial ventilation and the more general area of industrial air technology. New Russian data is included that fills several gaps in the scientific literature. Presents technology for energy optimization and environmental benefits. A collaborated effort from more than 60 ventilation experts throughout 18 countries. Based on more than 50 million dollars of research and development focused on industrial ventilation. Includes significant scientific contributions from leading ventilation experts in Russia. Presents new innovations including a rigorous design methodology and target levels. Contains extensive sections on design with modeling techniques. Content is well organized and easily adaptable to computer applications. [Industrial Ventilation Design Guidebook: Volume 1](#) Howard D. Goodfellow, Risto Kosonen, 2020-07-24 The fully revised and restructured two volume 2nd edition of the Industrial Ventilation Design Guidebook develops a systematic approach to the engineering design of industrial ventilation systems and provides engineers guidance on how to implement this state of the art ventilation technology on a global basis. Volume 1 Fundamentals features the latest research technology in the broad field of ventilation for contaminant control including extensive updates of the foundational chapters from the previous edition. With major contributions by experts from Asia, Europe and North America in the global industrial ventilation field, this new edition is a valuable reference for consulting engineers working in the design of air pollution and sustainability for their industrial clients, processing and manufacturing as well as mechanical process and plant engineers looking for design methodologies and advice on sensors and control algorithms for specific industrial operations so they can meet challenging targets in the low carbon economy. Presents practical designs for different types of industrial systems including descriptions and new designs for ducted systems. Discusses the basic processes of air and containment movements such as jets, plumes and boundary flows inside ventilated spaces. Introduces the new concept of target levels in the systematic design methodology such as assessing target levels for key parameters of industrial air technology and the hierarchy of different target levels. Provides future directions and opportunities in the industrial design field. [Industrial Ventilation Design Guidebook](#) Howard D.
