Optimization of the sustainability of contingency logistics networks: application of a hybrid heuristic & a multiobjective optimization approaches Havva Esra Dağ,Mehmet Miman,2019-02-15 Contingencies are unexpected crises or events that cause a major threat to the safety security and well being of a certain population This research effort builds upon the work on contingency logistics reliability models by Miman 2008 who extended the preliminary work conducted by Thomas 2004 that provides the modeling approach which takes a mission success orientation and focuses on the ability to recover from or prevent a contingency logistics failure Miman 2008 proposes the sustainability model of a contingency logistics network using the concept of selective maintenance This problem once formulated is a non convex non linear non separable multi dimensional discrete knapsack problem These problems are known to be NP hard Therefore one needs to explore heuristic solutions in search of

robust and effective solution approaches He developed a memetic algorithm GAFTS and proposed this for identifying the best set of maintenance actions to sustain the contingency logistics network Besides he used Physical Programming a multi criteria optimization procedure to exploit a network manager s preference toward the numerous criteria reliability cost time resource utilization etc judiciously This research effort continues the exploration of heuristic techniques for the sustainability model developed by Miman 2008 and develops a hybrid heuristics technique EDGASA incooperating simulating annealing SA procedure with genetic algorithm GA Comparisons of EDGASA with GA and SA reveal that it outperforms in terms of average reliability best reliability and worst reliability found at an expense of increased solution time One of the contributions of this study is a multi objective modeling approach developed based on utopia distance that aims at minimizing the weighted distance between a solution to the ideal point that could be achieved The study fills some of the voids in the contingency logistics networks solution and modeling and highlights potential studies by applying the hybrid heuristic developed as well as multiobjective modeling approach proposed to other problems *Mass Customization for Personalized Communication Environments: Integrating Human Factors* Mourlas, Constantinos, Germanakos, Panagiotis, 2009-10-31 This book focuses on the customization of services and communication environments to advance user satisfaction Provided by publisher
