

A ball of mass m moving with velocity $\vec{v}_i$ strikes a vertical wall as shown in [Figure 2](#). The angle between the ball's initial velocity vector and the wall is θ_i as shown on the diagram, which depicts the situation as seen from above. The duration of the collision between the ball and the wall is Δt , and this collision is completely elastic. Friction is negligible, so the ball does not start spinning. In this idealized collision, the force exerted on the ball by the wall is parallel to the x axis.
