Automotive Ergonomics Heiner Bubb, Klaus Bengler, Rainer E. Grünen, Mark Vollrath, 2021-10-19 Ergonomics teaches how to design technology in such a way that it is optimally adapted to the needs wishes and characteristics of the user In this context the concept of the human machine system has become established In a systematic way and with a detailed view of the complicated technical and perceptual psychological and methodological connections this book explains the basics of automotive ergonomics with numerous examples The application is shown in examples such as package design of displays and control elements of environmental ergonomics such as lighting sound vibrations climate and smell The design of driver assistance systems from an ergonomic perspective is also a central topic The book is rounded off by methods of ergonomic vehicle development the use of mock ups driving simulators and tests in real vehicles and prototypes For the first time those responsible in the automotive industry and in the field of relevant research are provided with a specialized systematic work that provides the ergonomic findings in the design of today s automobiles This provides planners and designers of today s automobiles with concrete information for ergonomic product development enabling them to keep an eye on decisive requirements and subsequent customer acceptance This book is a translation of the original German 1st edition

Automobilergonomie by Heiner Bubb Klaus Bengler Rainer E Gr nen Mark Vollrath published by Springer Fachmedien Wiesbaden GmbH part of Springer Nature in 2015 The translation was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors **Group**

Interests, Individual Attitudes Michael J Donnelly, 2021-07-10 What drives support for or opposition to redistributive taxation and spending Why is ethnic diversity associated with inequality and a lack of redistribution This book argues that many individuals recognizing that they live in a world of uncertainty use the groups of which they are a member as a heuristic to understand how welfare states are likely to impact them This leads to reduced support for redistribution among the wealthy whose disproportionate influence over policy in turn leads to less redistribution **Group Interests Individual Attitudes** develops the argument with a series of empirical implications which are then tested using data from a variety of sources It examines regional and ethnic politics in the United Kingdom Germany Slovakia Canada and Italy using a combination of qualitative and quantitative evidence existing and new surveys and observational and experimental methods The evidence is largely consistent with a heuristic theory allowing us to see group politics in a new light *Ford Mondeo*
