Subplane Covered Nets Norman L. Johnson, 2000-01-03 This work confronts the question of geometric processes of derivation specifically the derivation of affine planes keying in on construction techniques and types of transformations in which lines of a newly created plane can be understood as subplanes of the original plane The book provides a theory of subplane covered nets without restriction to the finite case or imposing commutativity conditions Vector and Tensor Analysis Eutiquio C. Young, 2017-12-19 Revised and updated throughout this book presents the fundamental concepts of vector and tensor analysis with their corresponding physical and geometric applications emphasizing the development of computational skills and basic procedures and exploring highly complex and technical topics in simplified settings This text incorporates transformation of rectangular cartesian coordinate systems and the invariance of the gradient divergence and the curl into the discussion of tensors combines the test for independence of path and the path independence sections offers new examples and figures that demonstrate computational methods as well as clarify concepts introduces subtitles in each section to highlight the appearance of new topics provides definitions and theorems in boldface type for easy identification It also contains numerical exercises of varying levels of difficulty and many problems solved
