New Methods of Concurrent Checking Michael Gössel,Vitaly Ocheretny,Egor Sogomonyan,Daniel Marienfeld,2008-04-26 Computers are everywhere around us We for example as air passengers car drivers laptop users with Internet connection cell phone owners hospital patients inhabitants in the vicinity of a nuclear power station students in a digital library or customers in a supermarket are dependent on their correct operation Computers are incredibly fast inexpensive and equipped with almost unimaginable large storage capacity Up to 100 million transistors per chip are quite common today a single transistor for each citizen of a large capital city in the world can be easily accommodated on an ordinary chip The size of such a chip is less than 1 cm This is a fantastic achievement for an unbelievably low price However the very small and rapidly decreasing dimensions of the transistors and their connections over the years are also the reason for growing problems with reliability that will dramatically increase for the nanotechnologies in the near future Can we always trust computers Are computers always reliable Are chips sufficiently tested with respect to all possible permanent faults if we buy them at a low price or have errors due to undetected permanent faults to be discovered by current checking Besides permanent faults many temporary or transient faults are also to be expected

The Berlin Defence Unraveled Luis Bernal,2017-06-27 The Berlin Defence has been a highly popular opening in top level chess ever since Vladimir Kramnik famously used it in the 2000 World Championship match to wrest the title from Garry Kasparov Club players often hesitate to include the Berlin in their repertoire because they see the typical Berlin Wall endgame as complex and daunting International Master Luis Bernal has unraveled the Berlin and made it accessible for amateur players His practical guide is fully up to date explains typical formations and strategies and presents new ideas and resources in the old Berlin Wall structures But today the Berlin is much more than just the Wall Bernal systematically leads you through the labyrinth of the various modern Anti Berlins with their constant flow of new ideas He also presents a number of tricky sidelines that could catch your opponent off guard This no nonsense state of the art guide finally brings this important chess opening within reach of club players With clear explanations concise conclusions and didactic exercises

Computer Chess Compendium D. LEVY,2013-06-29 For many years I have been interested in computer chess and have collected almost every learned paper and article on the subject that I could find My files are now quite large and a considerable amount of time effort and expense has been required to build up this collection I have often thought how difficult it must be for many computer chess enthusiasts to acquire copies of articles that they see referenced in some other work Unless one has access to a good reference library the task is almost impossible I therefore decided to try to make available in one volume as many as possible of the most interesting and important articles and papers ever written on the subject Such a selection is naturally somewhat subjective and I hope that I will not offend authors whose works have been

excluded In particular I have decided to exclude any material which has appeared in the Journal of the International Computer Chess Association ICCA or in its precursor the ICCA Newsletter The reason is simply that the ICCA itself is in the process of compiling a compendium containing the most important material published in those sources For further information on ICCA membership and publications the reader is invited to contact Professor H 1 van den Herik or Dr Jonathan Schaeffer University of Limburg Computing Science Dcpaitment Department of Computer Science University of Alberta 6200 MD Maastricht Edmonton Netherlands Alberta Canada T6G 2HI

A Chess Opening Repertoire for Blitz & Rapid Evgeny Sveshnikov,Vladimir Sveshnikov,2016-03-23 Playing blitz is one of the great joys in every chess player s life In modern times faster time controls have become more important than ever Every day innumerable numbers of rated blitz and rapid games are being played in online and over the board competitions and championships In blitz even more than in classical chess it is important to make the right decisions quickly and almost instinctively That is why world famous opening expert Grandmaster Evgeny Sveshnikov and his son International Master Vladimir Sveshnikov have created a chess opening repertoire for club players that is forcing both narrow and deep and aggressive The aim is to be in control as much as possible You want to be the one who decides which opening is going to be played you want to dictate the technical and strategic choices And you want to keep the pressure increasing your opponent s chances to stumble In designing their repertoire father and son Sveshnikov have made a crucial choice they do not want you to end up in positions where finding the theoretically best move is all important but in positions where it is relatively easy to keep finding the moves with the greatest practical effect and use If you play the lines the Sveshnikovs have selected your results will improve You may even end up playing their variations in slow chess as well
