Description

The Flexalarm 620 Conventional Fire Alarm Control Panel combines the latest in microprocessor technology with unparalleled years of experience. The Flex 620 provides the building owner with a fire alarm system that will provide years of service only Gamewell can offer.

The Flex 620 can monitor and control up to 128 Conventional Hardware Input/Output circuits. All circuits are backed up by Gamewell's Default Alarm Mode for added security, while the 1000 event history log furnishes a complete record of system activities. The Interactive Operator's Display uses LED prompting to ease both user operation and programming.

Field programming is easily accomplished by changing key functions on the Operator's Display or via a PC link.

With its embedded CPU that utilizes an Intel microprocessor, the Flex 620 offers all the features of today's most advanced life safety

systems. Through individual selection of I/O modules, the system engineer can customize the control panel to maximize efficiencies based on the application. The CPU automatically senses the system configuration to ensure that modules are correctly positioned to speed installation and maintenance of the most complex system. Assimilation of Emergency Voice capabilities is also simplified since all control can be handled by the main CPU.

The Flex 620's housing was designed to be both aesthetically pleasing and functionally sound. The dead front construction is designed to allow routine maintenance of the system without worry about disturbing the I/O Modules. Access to system function keys is limited by multiple levels of password protection to prohibit unauthorized use. In the event that a module needs service, the cabinet has been designed with permanent terminal strips so that a module can be quickly removed and replaced without disturbing the external wiring. This also allows wiring
