ECRM2014-Proceedings of the 13th European Conference on Research Methodology for Business and Management Studies Dr Martin Rich,Dr Anne Brown,2014-06-16 Standard Setting in Education Sigrid Blömeke,Jan-Eric Gustafsson,2017-02-27 This book summarizes the international evidence on methodological issues in standard setting in education By critically discussing the standard setting practices implemented in the Nordic countries and by presenting new methodological approaches it offers fresh perspectives on the current research Standard setting targets crucial societal objectives by defining educational benchmarks at different achievement levels and provides feedback to policy makers schools and teachers about the strengths and weaknesses of a school system Given that the consequences of standard setting can be dramatic the quality of standard setting is a prime concern If it fails repercussions can be expected in terms of arbitrary evaluations of educational policy wrong turns in school or teacher development or misplacement of individual students Standard setting therefore needs to be accurate reliable valid useful and defensible However specific evidence on the benefits and limits of different approaches to standard setting is rare and scattered and there is a particular lack with respect to standard setting in the Nordic countries where the number of national tests is increasing and there are concerns about the time and effort spent on testing at schools without feedback being provided Addressing this gap the book offers a discussion on standard setting by respected experts as well as profound and innovative insights into fundamental aspects of standard setting including conclusions for future methodological and policy related research *Publications of*

Bilateral Vestibulopathy - Current Knowledge and Future Directions to Improve its Diagnosis and Treatment Bryan K. Ward,Alexander A. Tarnutzer,2018-11-02 Many patients with bilateral vestibulopathy experience chronic oscillopsia due to failure of the vestibulo ocular reflex and gait instability due to failure of vestibulo spinal reflexes There are numerous potential contributing factors however many cases remain idiopathic The diagnosis of bilateral vestibulopathy is often delayed placing patients at risk for unnecessary diagnostic tests and late initiation of treatment Novel diagnostic tests offer new opportunities to characterize patterns of vestibular impairment With the advent of new therapies there is urgency to define and better understand patients with bilateral vestibulopathy This collection includes topics such as an exploration of the large class of patients with bilateral vestibulopathy currently considered idiopathic by identifying novel pathophysiologic mechanisms Other topics include a historical perspective on early recognition the impact of bilateral vestibular impairment on quality of life and how advances in diagnostics are refining our understanding of what it means to have bilateral vestibulopathy New developments in treatment strategies for patients with bilateral vestibulopathy are also featured [Textbook of Pediatric Gastroenterology, Hepatology and Nutrition](#)

Bioactive Compounds from Marine-Derived Aspergillus, Penicillium, Talaromyces and Trichoderma Species Rosario Nicoletti,Francesco Vinale,2019-05-27 Dear Colleagues The importance of bioactive natural compounds in pharmacology and other biotechnological fields has stimulated the scientific community to explore new environmental contexts and their associated microbial diversity As the largest frontier in biological discovery the sea represents a significant source of organisms producing novel secondary metabolites with interesting bioactivities Of the available biological material fungi have received increasing consideration both due to their pervasive occurrence in varying habitats as well as their aptitude to develop symbiotic associations with higher organisms in numerous contexts In many cases fungal strains have been reported as the real producers of drugs originally extracted from marine plants and animals Due to the constantly increasing number of

marine derived fungi yielding valuable bioactive products it is now appropriate to present these findings to a recipient audience in a more organized form This Special Issue of Marine Drugs entitled Bioactive Compounds from Marine Derived *Aspergillus* *Penicillium* *Talaromyces* and *Trichoderma* Species is specifically focused on a few genera of ascomycetous fungi which are widespread regarding marine contexts and are particularly inclined to establishing symbiotic relationships For this project we welcome submissions of full research papers short notes and review articles reporting the discovery and characterization of products showing antibiotic antitumor antiviral insecticidal antimalarial antifouling antioxidant plant growth promoting and or resistance inducing as well as other less exploited activities Dr Rosario Nicoletti Dr Francesco Vinale Guest Editors *The Ocean Sunfishes* Tierney M. Thys, Graeme C. Hays, Jonathan D. R. Houghton, 2020-12-10 *The Ocean Sunfishes* Evolution Biology and Conservation is the first book to gather into one comprehensive volume our fundamental knowledge of the world record holding charismatic ocean behemoths in the family Molidae From evolution and phylogeny to biotoxins biomechanics parasites husbandry and popular culture it outlines recent and future research from leading sunfish experts worldwide This synthesis includes diet foraging behavior migration and fisheries bycatch and overhauls long standing and outdated perceptions This book provides the essential go to resource for both lay and academic audiences alike and anyone interested in exploring one of the ocean s most elusive and captivating group of fishes *How Can Secretomics Help Unravel the Secrets of Plant-Microbe Interactions?* Delphine Vincent, Kim Marilyn Plummer, Peter Solomon, Marc-Henri Lebrun, Dominique Job, Maryam Rafiqi, 2017-01-27 Secretomics describes the global study of proteins that are secreted by a cell a tissue or an organism and has recently emerged as a field for which interest is rapidly growing The term secretome was first coined at the turn of the millennium and was defined to comprise not only the native secreted proteins released into the extracellular space but also the components of machineries for protein secretion Two secretory pathways have been described in fungi i the canonical pathway through which proteins bearing a N terminal peptide signal can traverse the endoplasmic reticulum and Golgi apparatus and ii the unconventional pathway for proteins lacking a peptide signal Protein secretion systems are more diverse in bacteria in which types I to VII pathways as well as Sec or two arginine Tat pathways have been described In oomycete species effectors are mostly small proteins containing an N terminal signal peptide for secretion and additional C terminal motifs such as RXLRs and CRNs for host targeting It has recently been shown that oomycetes exploit non conventional secretion mechanisms to transfer certain proteins to the extracellular environment Other non classical secretion systems involved in plant fungal interaction include extracellular vesicles EVs Figure 1 from Samuel et al 2016 Front Plant Sci 6 766 The versatility of oomycetes fungi and bacteria allows them to associate with plants in many ways depending on whether they are biotroph hemibiotroph necrotroph or saprotroph When interacting with a live organism a microbe will invade its plant host and manipulate its metabolisms either detrimentally if it is a pathogen or beneficially if it is a symbiote Deciphering secretomes became a crucial biological question when an increasing body of

evidence indicated that secreted proteins were the main effectors initiating interactions whether of pathogenic or symbiotic nature between microbes and their plant hosts Secretomics may help to contribute to the global food security and to the ecosystem sustainability by addressing issues in i plant biosecurity with the design of crops resistant to pathogens ii crop yield enhancement for example driven by arbuscular mycorrhizal fungi helping plant hosts utilise phosphate from the soil hence increase biomass and iii renewable energy through the identification of microbial enzymes able to augment the bio conversion of plant lignocellulosic materials for the production of second generation biofuels that do not compete with food production To this day more than a hundred secretomics studies have been published on all taxa and the number of publications is increasing steadily Secretory pathways have been described in various species of microbes and or their plant hosts yet the functions of proteins secreted outside the cell remain to be fully grasped This Research Topic aims at discussing how secretomics can assist the scientists in gaining knowledge about the mechanisms underpinning plant microbe interactions

Doeppner, Dirk M. Hermann, 2016-01-15 Stroke remains one of the most devastating diseases in industrialized countries Recanalization of the occluded arterial vessel using thrombolysis is the only causal therapy available However thrombolysis is limited due to severe side effects and a limited time window As such only a minority of patients receives this kind of therapy showing a need for new and innovative treatment strategies Although neuroprotective drugs have been shown to be beneficial in a variety of experimental stroke models they ultimately failed in clinical trials Consequently recent scientific focus has been put on modulation of post ischemic neuroregeneration either via stimulation of endogenous neurogenesis or via application of exogenous stem cells or progenitor cells Neurogenesis persists within the adult brain of both rodents and primates As such neural progenitor cells NPCs are found within distinct niches like the subventricular zone SVZ of the lateral ventricles and the subgranular zone of the dentate gyrus Cerebral ischemia stimulates these astrocyte like progenitor cells upon which NPCs proliferate and migrate towards the site of lesion There NPCs partly differentiate into mature neurons without significantly being integrated into the residing neural network Rather the majority of new born cells dies within the first weeks post stroke leaving post ischemic neurogenesis a phenomenon of unknown biological significance Since NPCs do not replace lost brain tissue beneficial effects observed in some studies after either stimulated or protected neurogenesis are generally contributed to indirect effects of these new born cells The precise identification of appropriated cellular mediators however is still elusive How do these mediators work Are they soluble factors or maybe even vesicular structures emanating from NPCs What are the cues that guide NPCs towards the ischemic lesion site How can post ischemic neurogenesis be stimulated How can the poor survival of NPCs be increased In order to support post ischemic neurogenesis a variety of research groups have focused on application of exogenous stem progenitor cells from various tissue sources Among these cultivated NPCs from the SVZ and mesenchymal stem cells MSCs from the bone marrow are frequently administered after induction of stroke Although neuroprotection after delivery of stem progenitor cells has been shown in various experimental stroke models transplanted cells are usually not integrated in the

neural network Again the vast amount of grafted cells dies or does not reach its target despite profound neuroprotection also suggesting indirect paracrine effects as the cause of neuroprotection Yet the factors being responsible for these observations are under debate and still have to be addressed Is there any optimal cell type for transplantation How can the resistance of grafted cells against a non favorable extracellular milieu be increased What are the molecules that are vital for interaction between grafted cells and endogenous NPCs The present research topic seeks to answer at least in part some of the aforementioned questions Although the research topic predominantly focuses on experimental studies and reviews alike a current outlook towards clinical relevance is given as well
