today's ways of life were created and spread from farming mining and engineering to housing and transportation cities and government writing and belief systems Transforming the planet this process unfolded all over the world in Eurasia Africa and the Americas often at different times sometimes haltingly but ultimately unstoppably Yet it's rarely studied or taught that way Since the eighteenth century Western intellectuals have dismembered the ancient world driven not only by their quest for professional expertise but also by nationalism colonialism racism and the idealization of Greece and Rome Specialized scholarship has fractured into numerous academic niches obscuring broader patterns and dynamics and keeping us from understanding just how much humanity has long had in common The time has come Scheidel argues to put the ancient world back together by moving beyond the limitations of Greco Roman classics by systematically comparing ancient societies and by exploring early exchanges and connections between them The time has come in other words for an ancient history for everyone Jack Goody between Social Anthropology and World History LIT Verlag,2024-10-01

**On Learning** David Scott,2021-05-20 This is a philosophical work that develops a general theory of ontological objects and object relations It does this by examining concepts as acquired dispositions and then focuses on perhaps the most important of these the concept of learning This concept is important because everything that we know and do in the world is predicated on a prior act of learning A concept can have many meanings and can be used in a number of different ways and this creates difficulty when considering the nature of objects and the relationships between them To enable this David Scott answers a series of questions about concepts in general and the concept of learning in particular Some of these questions are What is learning What different meanings can be given to the notion of learning How does the concept of learning relate to other concepts such as innatism development and progression The book offers a counter argument to empiricist conceptions of learning to the propagation of simple messages about learning knowledge curriculum and assessment and to the denial that values are central to understanding how we live It argues that values permeate

everything our descriptions of the world the attempts we make at creating better futures and our relations with other people
