**Diverse Learners** Keri-Anne Croce, 2017-04-01 This book addresses how to assess and instruct students while also honoring their cultural and linguistic backgrounds. Many individuals want to support their multilingual learners but do not have the language skills to work in a bilingual or dual language setting. The chapters in this book examine assessment in classrooms where English is the language of instruction yet students are also encouraged to communicate in multiple languages. The thesis of this book revolves around the idea that linguistically diverse learners may engage in critical thinking in ways that we may not anticipate. Students who are learning in an additional language do not need to catch up. Assessment should instead measure the new ways that students are interacting with the world. This book helps you discover the many ways to help students develop as critically thinking readers, writers and speakers. There is a scarcity of research addressing literacy among linguistically diverse learners within math and science. The information contained in this book will hopefully advance a dialogue between teachers and linguistically diverse students as they read and write multiple genres together. This book also encourages teachers, family and community members to come together to form supportive environments where best practices are fostered. Some of the questions addressed by this book: 1. How do I determine a student's strengths and needs if he or she

is not talking in class in any language 2 Do I teach monolingual and multilingual learners to read in similar ways 3 How can I support my students as they read math word problems 4 What do students need to know about the structures of science texts 5 How should we develop math and science literacy assessments 6 Should I have specific language goals for students as speakers *Improving Reading Comprehension of Middle and High School Students* Kristi L. Santi, Deborah K.

Reed, 2015-03-04 This volume focuses on our understanding of the reading comprehension of adolescents in a high stakes academic environment Leading researchers share their most current research on each issue covering theory and empirical research from a range of specializations including various content areas English language learners students with disabilities and reading assessment Topics discussed include cognitive models of reading comprehension and how they relate to typical or atypical development of reading comprehension reading in history classes comprehension of densely worded and symbolic mathematical texts understanding causality in science texts the more rigorous comprehension standards in English language arts classes balancing the practical and measurement constraints of the assessment of reading comprehension understanding the needs and challenges of English language learners and students in special education with respect to the various content areas discussed in this book This book is of interest to researchers in literacy and educational psychology as well as curriculum developers
