Non-Isolated DC-DC Converters for Renewable Energy Applications Frede Blaabjerg, Mahajan Sagar Bhaskar, Sanjeevikumar Padmanaban, 2021-04-22

Photovoltaic PV energy generation is an excellent example of large scale electric power generation through various parallel arrangements of small voltage generating solar cells or modules. However, PV generation systems require power electronic converters system to satisfy the need for real time applications or to balance the demand for power from electric. Therefore, a DC/DC power converter is a vital constituent in the intermediate conversion stage of PV power. This book presents a comprehensive review of various non-isolated DC/DC power converters. Non-isolated DC/DC converters for renewable energy system (RES) application presented in this book (1st edition) through a detailed original investigation obtained numerical experimental results and guided the scope to design new families of converters: DC/DC multistage power converter topologies: Multistage X/Y converter family, N_x IMBC, N_x Interleaved Multilevel Boost Converter, Cockcroft-Walton (CW) Voltage Multiplier Based Multistage Multilevel Power Converter, CW-VM-MPC converter topologies and Z-source and quasi-Z-source. Above solutions are discussed to show how they can achieve the maximum voltage conversion gain ratio by adapting the passive/active component within the circuits. For assessment, we have recommended novel power converters through their functionality and designs tested and verified by numerical software. Further, the hardware prototype implementation is carried out through a flexible digital processor. Both numerical and experimental results always shown as expected close agreement with primary theoretical hypotheses. This book offers guidelines and recommendation for future development with the DC/DC converters for RES applications based on cost-effective and reliable solutions.
