communicable diseases such as obesity diabetes hypertension and cardiovascular diseases are clearly noticed across the globe The study of nutrition systems food security and the roles of technological advances especially in LMIC is considered the major factor in understanding food transition and population health Physical inactivity threatens LMIC public health as it is a prime behavioral risk factor associated with major non communicable diseases such as coronary heart disease type 2 diabetes and breast and colon cancer Its long term impacts increasingly burden national economies Decreasing its prevalence is paramount toward decreasing premature mortality and restoring healthy populations In its most recent iteration of a global action plan for the prevention of non communicable diseases the World Health Organization established voluntary global targets to reduce physical inactivity by 10% Currently limited published systematic analysis of physical inactivity prevalence among Muslim majority countries exists Existing literature is concentrated on Arab countries which represent less than half of all Muslim nations To date however pan Islamic physical inactivity data have not been reported Doing so can potentially galvanize religion specific agencies e g Islamic Relief Worldwide Organization of Islamic Cooperation to support efforts aimed at decreasing physical inactivity
