| 1.1.1  | Direct coupling is normally associated with low-frequency applications.                                                                                         | (1) |
| 1.1.2  | An inductor is connected in parallel with a capacitor. If the inductance is doubled, and the capacitance is halved, the impedance at resonance will be doubled. | (1) |
| 1.1.3  | The equation: $V_1 = I_1 R_1 + (I_1 - I_2) R_2 + I_2 R_3$ is an example of Kirchhoff's voltage law.                                                             | (1) |
| 1.1.4  | Transition capacitance occurs when a PN junction is forward biased.                                                                                             | (1) |
| 1.1.5  | In a capacitor the frequency is directly proportional to the capacitive reactance.                                                                              | (1) |
