

$$b^2 - 4(ac)$$

### Understanding the Discriminant

Find the value of the discriminant of each quadratic equation.

1)  $6p^2 - 2p - 3 = 0$

$$4 - 4(-18)$$

$$4 + 72 = \boxed{76}$$

2)  $-2x^2 - x - 1 = 0$

$$1 - 4(2)$$

$$1 - 8 = \boxed{-7}$$

3)  $-4m^2 - 4m + 5 = 0$

$$16 - 4(-20)$$

$$16 + 80 = \boxed{96}$$

4)  $5b^2 + b - 2 = 0$

$$1 - 4(-10)$$

$$1 + 40 = \boxed{41}$$

5)  $r^2 + 5r + 2 = 0$

$$25 - 4(2)$$

$$25 - 8 = \boxed{17}$$

6)  $2p^2 + 5p - 4 = 0$

$$25 - 4(-8)$$

$$25 + 32 = \boxed{57}$$

Find the discriminant of each quadratic equation then state the number of real and imaginary solutions.

7)  $9n^2 - 3n - 8 = -10$

$$9n^2 - 3n + 12 = 0$$

$$b^2 - 4ac$$

$$9 - 4(12)$$

$$9 - 48 = -39$$

$$b^2 - 4ac = -39$$

$$9n^2 - 3n + 12 = 0$$

$$b^2 - 4ac$$

$$9 - 4(12) = -39$$

$$b^2 - 4ac = -39$$

$$9n^2 - 3n + 12 = 0$$

$$b^2 - 4ac$$

$$9 - 4(12) = -39$$

8)  $-2x^2 - 8x - 14 = -6$

$$-2x^2 - 8x - 8 = 0$$

$$b^2 - 4ac$$

$$64 - 4(8)$$

$$64 - 32 = 32$$

$$b^2 - 4ac = 32$$

$$-2x^2 - 8x - 8 = 0$$

$$b^2 - 4ac$$

$$64 - 4(8) = 32$$

$$b^2 - 4ac = 32$$

$$-2x^2 - 8x - 8 = 0$$

$$b^2 - 4ac$$

$$64 - 4(8) = 32$$

**Matter Particled** Yuval Ne'eman, Remo Ruffini, Yosef Verbin, 2006 This unique volume contains a selection of more than 80 of Yuval Ne'eman's papers which represent his huge contribution to a large number of aspects of theoretical physics. The works span more than four decades from unitary symmetry and quarks to questions of complexity in biological systems and evolution of scientific theories. In keeping with the major role Ne'eman has played in theoretical physics over the last 40 years, a collaboration of very distinguished scientists enthusiastically took part in this volume. Their commentary supplies a clear framework and background for appreciating Yuval Ne'eman's significant discoveries and pioneering contributions.

Smalø, Øyvind Solberg, Canadian Mathematical Society, 1998 Surveys developments in the representation theory of finite dimensional algebras and related topics in seven papers illustrating different techniques developed over the recent years. For graduate students and researchers with a background in commutative algebra including rings modules and homological algebra. Suitable as a text for an advanced graduate course. No index. **Operator Algebras** Ola Bratteli, Sergey Neshveyev, Christian Skau, 2007-01-19 The theme of the first Abel Symposium was operator algebras in a wide sense. In the last 40 years operator algebras have developed from a rather special discipline within functional analysis to become a central field in mathematics often described as non commutative geometry. It has branched out in several sub disciplines and made contact with other subjects. The contributions to this volume give a state of the art account of some of these sub disciplines and the variety of topics reflect to some extent how the subject has developed. This is the first volume in a prestigious new book series linked to the Abel prize.

**Algebras, Quivers and Representations** Aslak Bakke Buan, Idun Reiten, Øyvind Solberg, 2013-08-24 This book features survey and research

papers from The Abel Symposium 2011 Algebras quivers and representations held in Balestrand Norway 2011 It examines a very active research area that has had a growing influence and profound impact in many other areas of mathematics like commutative algebra algebraic geometry algebraic groups and combinatorics This volume illustrates and extends such connections with algebraic geometry cluster algebra theory commutative algebra dynamical systems and triangulated categories In addition it includes contributions on further developments in representation theory of quivers and algebras

*Algebras Quivers and Representations* is targeted at researchers and graduate students in algebra representation theory and triangulate categories

*Universal Algebra* George Grätzer, 2008-12-15 *Universal Algebra* heralded as the standard reference in a field notorious for the lack of standardization has become the most authoritative consistently relied on text in a field with applications in other branches of algebra and other fields such as combinatorics geometry and computer science Each chapter is followed by an extensive list of exercises and problems The state of the art account also includes new appendices with contributions from B J nsson R Quackenbush W Taylor and G Wenzel and a well selected additional bibliography of over 1250 papers and books which makes this an indispensable new edition for students faculty and workers in the field This book will certainly be in the years to come the basic reference to the subject The American Mathematical Monthly First Edition In this reviewer s opinion the author has more than succeeded in his aim The problems at the end of each chapter are well chosen there are more than 650 of them The book is especially suitable for self study as the author frequently provides ample explanation not only of what he is proving but also of how and why he is proving it As a reference work for the specialist or a text for the student the book is highly recommended Mathematical Reviews First Edition Since the first day of its appearance in 1968 this book has been the standard reference in universal algebra and no book since has reached its quality Journal of Symbolic Logic Second Edition

*Representations of Algebras* P. Webb, 1986-01-08 The latest developments in representation theory with emphasis on the representation type of finite dimensional algebras

*Selected Papers and Other Writings* Irving Kaplansky, 1995-04-13 It is not often that one gets to write a preface to a collection of one s own papers The most urgent task is to thank the people who made this book possible That means first of all Hy Bass who on behalf of Springer Verlag approached me about the idea The late Walter Kaufmann Biihler was very encouraging Paulo Ribenboim helped in an important way and Ina Lindemann saw the project through with tact and skill that I deeply appreciate My wishes have been indulged in two ways First I was allowed to follow up each selected paper with an afterthought Back in my student days I became aware of the *Gesammelte Mathematische Werke* of Dedekind edited by Fricke Noether and Ore I was impressed by the editors notes that followed most of the papers and found them very useful A more direct model was

furnished by the collected papers of Lars Ahlfors in which the author himself supplied afterthoughts for each paper or group of papers These were tough acts to follow but I hope that some readers will find at least some of my afterthoughts interesting Second I was permitted to add eight previously unpublished items My model here to a certain extent was the charming little book *A Mathematician's Miscellany* by J E Littlewood In picking these eight I had quite a selection to make from fourteen loose leaf notebooks of such writings Here again I hope that at least some will be found to be of interest

*Universal Algebra, Algebraic Logic, and Databases* B. Plotkin, 2012-12-06 Modern algebra which not long ago seemed to be a science divorced from real life now has numerous applications Many fine algebraic structures are endowed with meaningful contents Now and then practice suggests new and unexpected structures enriching algebra This does not mean that algebra has become merely a tool for applications Quite the contrary it significantly benefits from the new connections The present book is devoted to some algebraic aspects of the theory of databases It consists of three parts The first part contains information about universal algebra algebraic logic is the subject of the second part and the third one deals with databases The algebraic material of the first two parts serves the common purpose of applying algebra to

databases The book is intended for use by mathematicians and mainly by algebraists who realize the necessity to unite theory and practice It is also addressed to programmers engineers and all potential users of mathematics who want to construct their models with the help of algebra and logic Nowadays the majority of professional mathematicians work in close cooperation with representatives of applied sciences and even industrial technology It is necessary to develop an ability to see mathematics in different particular situations One of the tasks of this book is to promote the acquisition of such skills

*Algebras of Unbounded Operators* Aleksey Ber,Vladimir Chilin,Galina Levitina,Fedor Sukochev,Dmitriy Zanin,2025-03-03 Derivations on von Neumann algebras are well understood and are always inner meaning that they act as commutators with a fixed element from the algebra itself The purpose of this book is to provide a complete description of derivations on algebras of operators affiliated with a von Neumann algebra The book is designed to serve as an introductory graduate level to various measurable operators affiliated with a von Neumann algebras and their properties These classes of operators form their respective algebras and the problem of describing derivations on these algebras was raised by Ayupov and later by Kadison and Liu A principal aim of the book is to fully resolve the Ayupov Kadison Liu problem by proving a necessary and sufficient condition of the existence of non inner derivation of algebras of measurable operators It turns out that only for a finite type I von Neumann algebra  $M$  may there exist a non inner derivation on the algebra of operators affiliated with  $M$  In particular it is established that the classical derivation  $d/dt$  of functions of real variables can be extended up to a derivation on the algebra of all measurable functions This resolves a long standing problem in classical analysis **Computer Science**

further development The topics under discussion include diagram algebras Brauer algebras cellular algebras quasi hereditary algebras Hall algebras Hecke algebras symplectic reflection algebras Cherednik algebras Kashiwara crystals Fock spaces preprojective algebras cluster algebras rank varieties varieties of algebras and modules moduli of representations of quivers semi invariants of quivers Cohen Macaulay modules singularities coherent sheaves derived categories spectral representation theory Coxeter polynomials Auslander Reiten theory Calabi Yau triangulated categories Poincare duality spaces selfinjective algebras periodic algebras stable module categories Hochschild cohomologies deformations of algebras Galois coverings of algebras tilting theory algebras of small homological dimensions representation types of algebras and model theory This book consists of fifteen self contained expository survey articles and is addressed to researchers and graduate students in algebra as well as a broader mathematical community They contain a large number of open problems and give new perspectives for research in the field

A Course in Operator Theory John B. Conway, 2025-05-01 Operator theory is a significant part of many important areas of modern mathematics functional analysis differential equations index theory representation theory mathematical physics and more This text covers the central themes of operator theory presented with the excellent clarity and style that readers have come to associate with Conway's writing Early chapters introduce and review material on  $C^*$  algebras normal operators compact operators and non normal operators Some of the major topics covered are the spectral theorem the functional calculus and the Fredholm index In addition some deep connections between operator theory and analytic functions are presented Later chapters cover more advanced topics such as representations of  $C^*$  algebras compact perturbations and von Neumann algebras Major results such as the Sz Nagy Dilation Theorem the Weyl von Neumann Berg Theorem and the classification of von Neumann algebras are covered as is a treatment of Fredholm theory The last chapter gives an introduction to reflexive subspaces which along with hyperreflexive spaces are one of the more successful episodes in the modern study of asymmetric algebras Professor Conway's authoritative treatment makes this a compelling and rigorous course text suitable for graduate students who have had a standard course in functional analysis

**Advanced Topics in Relation Algebras** Steven Givant, 2017-08-29 The second volume of a pair that charts relation algebras from novice to expert level this text brings the well grounded reader to the frontiers of research Building on the foundations established in the preceding *Introduction to Relation Algebras* this volume advances the reader into the deeper mathematical results of the past few decades Such material offers an ideal preparation for research in relation algebras and Boolean algebras with operators Arranged in a modular fashion this text offers the opportunity to explore any of several areas in detail topics include canonical extensions completions representations varieties and atom structures Each chapter offers a complete account of one such avenue of development including a historical section and substantial number of exercises The clarity of exposition and comprehensive nature of each module make this an ideal text for the independent reader entering the field while researchers will value it as a reference for years to come Collecting

curating and illuminating over 75 years of progress since Tarski's seminal work in 1941 this textbook in two volumes offers a landmark unified treatment of the increasingly relevant field of relation algebras Clear and insightful prose guides the reader through material previously only available in scattered highly technical journal articles Students and experts alike will appreciate the work as both a textbook and invaluable reference for the community Note that this volume contains numerous essential references to the previous volume Introduction to Relation Algebras The reader is strongly encouraged to secure at least electronic access to the first book in order to make use of the second *The Genesis of Logic* Enric Trillas, 2024-05-23 The Genesis of Logic addresses the principles of common sense reasoning which are employed in everyday decision making processes and extend beyond deductive reasoning alone Linked to language logic inherits its flexibility These are a few laws the formal skeleton of reasoning based on the relationship of linguistic inference that while needing to be represented in each context allow for the consideration of non comparable orthogonal statements By facilitating deduction and abduction speculation emerges as a fundamental intellectual operation As a whole this work offers a new genetic evolutionary perspective to reconsider Logic a panoramic outlook that examines laws outside the skeleton as local laws necessary for the validity of specialized reasoning It moves away from the rigid reticular structure of sets of statements and views induction as the search for speculations non monotonic reasoning as speculative and conjecture only proven in finite Boolean algebras that reasoning involves following paths of inference in a zigzag pattern alternating between deduction and abduction

Subjective Probability: the Only Kind Possible Paolo Manca, 2017-07-06 In the context of a non deterministic view of the world probability is a number which reflects the degree of confidence someone has that a given statement or event is true based on the information they have Probability and probability calculus on the other hand are essential tools for those who wish to recognise uncertainty and manage it responsibly This presentation of subjective probability the only one possible will enable even those who are not experts to acquire the correct knowledge of an instrument which is essential and necessary for dealing with the world around us The text takes only one hour to read but it will help you to avoid many mistakes and enable you to understand the origin of those you might have made in the past The reader will also be able to appreciate many funny examples and paradoxes such as this one statistics tell us that 20% of motorway car accidents are caused by drivers with high blood alcohol levels It can then be derived that 80% of accidents are caused by sober drivers Therefore we should supply alcohol to those who drive on motorways **Oxford Studies in Metaethics 12** Russ Shafer-Landau, 2017-07-06 Oxford Studies in Metaethics is the only publication devoted exclusively to original philosophical work in the foundations of ethics It provides an annual selection of much of the best new scholarship being done in the field Its broad purview includes work being done at the intersections of ethical theory with metaphysics epistemology philosophy of language and philosophy of mind The essays included in the series provide an excellent basis for understanding recent developments in the field those who would like to acquaint themselves with the current state of play in metaethics would do well to start here
