Design Features

- The conservative load carrying capacity of the larger diameter rolling element bearings ensures an extended operating life — the design basis is 52,000 hours. Timing gear life is also extended by a controlled lubrication system.
- The computer calculated impeller profiles ensure maximum volumetric efficiency with minimum absorbed power without sacrificing torsional rigidity.
- The high rigidity of the impeller/shafts permits a higher pressure rise to be obtained than with other machines of comparable size. The generous shaft diameter keeps drive stresses low.
- Gear and shaft strength is substantially increased by the use of taper mounted gears which do not need keyways for location. Setting of the gear wheels to obtain correct timing of the impellers is simplified, a feature that facilitates field maintenance.
- Precision ground and hardened

the rotating impellers. A controlled lubrication system is provided to ensure efficient operation without waste of energy in the gearcase.

- Specially designed rotary oil seals are used in the gearcase. This feature eliminates maintenance associated with the use of lip seals.
- Design and manufacture is in accordance with metric standards.

User Benefits

- The delivered air is guaranteed to be oil free because internal lubrication is unnecessary, and because all Holmes Positive Displacement Air Blowers are constructed with air gaps which completely isolate bearing and gear lubricants from the compression chamber.
- Noise levels are kept to a

of the taper mounted gears. Air noise is reduced by carefully designed air ports and the elimination of resonant unbraced surfaces.

- The generous diameter of the drive shaft permits the use of V-belt drives without the need for a double outer bearing.
- A patented blower protection device can be supplied. This is designed to trip the drive motor and shut down the blower if the internal clearances are reduced to a dangerous level.
- Thermostatically controlled heaters can be fitted as an optional extra. These regulate lubricating oil temperatures, and permit the use of a single grade of oil under widely varying ambient conditions.
- Servicing and impeller clearance checks can be carried out at site without the need to dismantle pipework or remove the blower from its base.
- All machines are performance tested under the most arduous design conditions before despatch.
- Air blowers can also be used as
