

TRACTOR HOOK-UP INSTRUCTIONS

INSTRUCTIONS FOR ATTACHING UNIVERSAL HITCH TO TRACTORS USING A.S.A.E. SWINGING DRAWBAR

The following information is given to assist in the attaching of the universal hitch to various makes of tractors.

Where adjustments are possible to the tractor drawbar, the top of the universal hitch bar should be 16" to 17" from the ground.

The universal hitch bar always attaches in the end hole of the swinging tractor drawbar.

On tractor models not shown in chart, a hole in the adjustable arm of the hitch should be so matched with a hole in the horizontal tractor hitch member that the line of the two mower

mounting holes "A", Fig. 12, is as nearly parallel as possible to the back of the tractor.

Where rear wheel tracks are adjustable, it must be borne in mind that the outside of the tire should not be more than 21" from the centre of the right mower mounting hole for good crop clearance. The working side of the inner shoe, however, is 24 $\frac{1}{2}$ " from the centre of the right mounting hole which allows for a compromise where necessary with fixed tread tractors.

On the John Deere "3", "D" and "A" tractors, the drive tube and the drive shaft must have six inches (6") cut off each to hitch the mower to these tractors properly.
