Materials Michael F. Ashby, Hugh Shercliff, David Cebon, 2018-11-27. *Materials Engineering Science: Processing and Design* is the essential materials engineering text and resource for students developing skills and understanding of materials properties and selection for engineering applications. Taking a unique design led approach that is broader in scope than other texts, *Materials* meets the curriculum needs of a wide variety of courses in the materials and design field, including introduction to materials science and engineering, engineering materials, materials selection, and processing and behavior of materials. This new edition retains its design led focus and strong emphasis on visual communication while expanding its coverage of the physical basis of material properties and process selection. Design led approach motivates and engages students in the study of materials science and engineering through real life case studies and illustrative applications. Highly visual, full color graphics facilitate understanding of materials concepts and properties. Chapters on materials selection and design are integrated with chapters on materials fundamentals, enabling students to see how specific fundamentals can be important to the design process. For instructors, a solutions manual, lecture slides, and image bank are available at <https://educate.elsevier.com/book/details/9780081023761>. New to this edition: Expansion of the atomic basis of properties and the distinction between bonding sensitive and microstructure sensitive properties. Process selection extended to include a structured approach to managing the expert knowledge of how materials processes and design interact with an introduction to additive manufacturing. Coverage of materials and the environment has been updated with a new section on Sustainability and Sustainable Technology. Text and figures have been revised and updated throughout. The number of worked examples and end of chapter problems has been significantly increased.

Recent Advances in Microelectronics Reliability Willem Dirk van Driel, Klaus Pressel, Mujdat Soyuturk, 2024-07-12. This book describes the latest progress in reliability analysis of microelectronic products. The content grows out of an EU project named Intelligent Reliability 4.0 iRel40. Different industrial sectors and topics are covered, such as electronics in automotive, rail transport, lighting, and personal appliances. Several case studies and examples are discussed, which will enable readers to assess and mitigate similar failure cases. More importantly, this book tries to present methodologies and useful approaches in analyzing a failure and in relating a failure to the reliability of electronic devices.
