The Organization of Information Daniel N. Joudrey, 2025-09-04 Organizing information is at the heart of the information professions, and the fifth edition of *The Organization of Information* is a key resource for anyone seeking up-to-date guidance. For millennia, information organization has been central to the functioning of libraries and other information institutions. The fifth edition of *The Organization of Information* provides a timely, detailed introduction to organizing in a variety of information contexts, including library cataloging, archival description, indexing, museum registration, metadata creation for digital collections, organizing on the web, linked data, and the development of the Semantic Web. Examining how and why information professionals organize information in contemporary libraries, archives, museums, and in a variety of online settings, expert Daniel N. Joudrey addresses the types of retrieval tools used throughout information organizations, the functionality of information systems, and the role and effect of technology on information organization. A discussion of encoding follows, explaining the basics of the MARC format, several XML schemas, and the developing BIBFRAME standard. A section on the principles and functionality of metadata covers metadata types, metadata characteristics, and tools used to manage metadata projects. A timely new chapter on conceptual models and frameworks articulates the visions behind the Library Reference Model (LRM), Records in Contexts (RiC), and the Semantic Web, including a discussion of RDF as its underlying structural model. Finally, the latter portion of the book describes practices related to the creation of descriptive metadata. Providing a thorough overview of the field's major issues, challenges, and standards, *The Organization of Information* is an essential resource for students in library and information science programs, as well as for established professionals who want to refresh their knowledge of the latest developments in the field.
