Genetic Programming III John R. Koza,1999 Genetic programming GP is a method for getting a computer to solve a problem by telling it what needs to be done instead of how to do it Koza Bennett Andre and Keane present genetically evolved solutions to dozens of problems of design control classification system identification and computational molecular biology Among the solutions are 14 results competitive with human produced results including 10 rediscoveries of previously patented inventions *Advances in Genetic Programming* Kenneth E. Kinneer, Peter J. Angeline, Lee Spector, 1994 Advances in Genetic Programming reports significant results in improving the power of genetic programming presenting techniques that can be employed immediately in the solution of complex problems in many areas including machine learning and the simulation of autonomous behavior Popular languages such as C and C++ are used in many of the applications and experiments illustrating how genetic programming is not restricted to symbolic computing languages such as LISP Researchers interested in getting started in genetic programming will find information on how to begin on what public domain code is available and on how to become part of the active genetic programming community via electronic mail **Analoge**
