SIXTH EDITION

EDWARDS & PENNEY

ABOUT THE COVER. This image illustrates the trajectory of a moving point whose space coordinates satisfy (as functions of time) the

kicker system of differential equations that is discussed on page 151, and which originated in studies of oscillations in chemical reactions. In its motion along its trajectory the point may appear to spiral repeatedly around a set — the so-called *kicker band* — that somewhat resembles a (twisted) Möbius strip in space. To portray the progress of the moving point, we can regard its trajectory as a necklace string on which beads are placed to mark its successive positions at fixed increments of time (as the point is moving faster where the spacing between beads is greater). In order to aid the eye in following the moving point's progress, the color of the beads changes continuously with the passage of time and motion along the trajectory. As the point travels around and around the band, it may be observed to drift radially back and forth across the band in an apparently unpredictable fashion. Two points that start from nearby initial positions may loop around and around the band somewhat in synchrony, while moving radially in quite different ways, so that their trajectories diverge appreciably with the passage of time. This illustrates the phenomenon of chaos, in which tiny differences in initial conditions can result in great differences in the resulting situations some time later. Further discussion of chaos associated with differential equations can be found in Section 7.6. Throughout this textbook computer-generated graphics are used to portray numerical and symbolic solutions of differential equations vividly and to provide additional insight.
