## Pharmacokinetics and Pharmacodynamics

### OBJECTIVES

1. Differentiate the three phases of drug action.
2. Describe the four processes of pharmacokinetics.
3. Identify the four receptor families.
4. Describe the influence of protein binding on drug bioavailability.
5. Check drugs for half-life, percentage of protein binding, therapeutic index, and side effects in a drug reference book.
6. Differentiate the four types of drug interactions.
7. Explain the three mechanisms involved with drug-drug interactions.
8. Describe the effects of drug-nutrient interactions.
9. Explain the meaning of drug-induced photosensitivity.
10. Describe the nursing implications of pharmacokinetics and pharmacodynamics.

### Pharmacokinetics

- The process of drug movement throughout the body necessary to achieve drug action.
- What the body does to the drug
- Composed of four processes:
  1. Absorption
  2. Distribution
  3. Metabolism
  4. Excretion
- **Drug absorption**
  - The movement of the drug into the bloodstream after administration.
  - Approximately 80% of drugs are taken by mouth (enteral).
    - These are the only drugs to pass through the GI tract
    - For the body to use drugs taken by mouth, a drug in a solid form (e.g., tablet or capsule) must disintegrate into small particles and combine with a liquid to form a solution, a process known as *dissolution* (drugs in a liquid form are already in solution), to be absorbed from the GI tract into the bloodstream
  - Tablets are not 100% drug. Fillers and inert substances – such as simple syrup, vegetable gums, aromatic powder, honey, and various elixirs – called *excipients* are used in drug preparation to allow the drug to take on a particular size and shape and to enhance drug dissolution.
  - **Disintegration** - Breakdown of oral drug form into small particles
  - **Dissolution** - Combining small drug particles with liquid to form a solution
    - The rate of dissolution is the time it takes the drug to disintegrate and dissolve to become available for the body to absorb it.

**Integrated Safety and Risk Assessment for Medical Devices and Combination Products** Shayne C. Gad, 2020-02-24 While the safety assessment biocompatibility of medical devices has been focused on issues of local tissue tolerance irritation sensitization cytotoxicity and selected quantal effects genotoxicity and acute lethality since first being regulated in the late 1950s this has changed as devices assumed a much more important role in healthcare and became more complex in both composition and in their design and operation Add to this that devices now frequently serve as delivery systems for drugs and that drugs may be combined with devices to improve device performance and the problems of ensuring patient safety with devices has become significantly more complex A part of this requirements for ensuring safety once based on use of previously acceptable materials largely polymers and metals have come to requiring determining which chemical entities are potentially released from a device into patients and how much is released Then an appropriate and relevant yet also conservative risk assessment must be performed for each identified chemical structure The challenges inherent in meeting the current requirements are multifold and this text seeks to identify understand and solve all of them Identify and verify the most appropriate available data As in most cases such data is for a different route of exposure transform it for use in assessing exposure by the route of interest As the duration and rate of exposure to moieties released from a device are most frequently different longer than what available data speaks to transformation across tissue is required As innate and adaptive immune responses are a central part of device patient interaction assessing potential risks on this basis are required Incorporating assessments for special populations such as neonates Use of Q SAR Quantitative Structure Activity Relationships modeling in assessments Performance and presentation of integrative assessments covering all potential biologic risks Appendices will contain summarized available biocompatibility data for commonly used device materials polymers and metals and safety assessments

on the frequently seen moieties in extractions from devices      **Emergency Medical Services** David Cone, Jane H. Brice, Theodore R. Delbridge, J. protein microarray wikipedia - Oct 09 2023

web a protein microarray or protein chip is a high throughput method used to track the interactions and activities of proteins and to determine their function and determining function on a large scale its main advantage lies in the fact that large numbers of proteins can be tracked in parallel

**protein microarray technology wiley online books** - Feb 01 2023

web dec 11 2003 this book is the first of its kind in the field of protein microarrays and addresses novel strategies for constructing highly functional and biocompatible microarrays for screening proteins the list of authors consisting of world leading experts provide a roadmap for solving the complex challenges that are currently faced while monitoring

proteome microarray technology and application higher wider - Mar 02 2023

web span b introduction b protein microarray is a powerful tool for both biological study and clinical research the most useful features of protein microarrays are their miniaturized size low reagent and sample consumption high sensitivity and their

capability for parallel high throughput analysis t span

**protein microarray technology pubmed** - May 04 2023

web protein chips have emerged as a promising approach for a wide variety of applications including the identification of protein protein interactions protein phospholipid interactions small molecule targets and substrates of proteins kinases they can also be used for clinical diagnostics and monitoring disease states

*protein microarray technology sciencedirect* - Apr 22 2022

web jan 1 2007 protein microarrays proteomics high throughput kinase substrates dna binding proteins microarray understanding complex cellular systems will require the identification and analysis of each of its components and determining how they function together and are regulated

protein microarray technology sciencedirect - Aug 27 2022

web aug 1 2002 protein microarrays in principle any kind of ligand binding assay that relies on the product formation of an immobilised capture molecule and a target binder or analyte present in the surrounding solution can be miniaturised parallelised and performed in a microar ray format

protein microarrays biotechniques - Jul 06 2023

web may 21 2018 protein microarrays also known as protein chips are miniaturized and parallel assay systems that contain small amounts of purified proteins in a high density format 1 they allow simultaneous determination of a great variety of analytes from small amounts of samples within a single experiment

**protein microarray an overview sciencedirect topics** - Jun 05 2023

web the protein microarray technology provides a versatile platform for characterization of hundreds of thousands of proteins in a highly parallel and high throughput manner it is viewed as a new tool that overcomes the limitation of dna microarrays

*protein microarray technology pubmed* - Nov 29 2022

web jan 1 2002 abstract this review summarizes the major activities in the field of protein microarray technology a short summary of the theoretical concepts of miniaturized ligand binding assays explains why such microspot assays represent the most sensitive approaches for capture target assays

**applications of protein microarrays in biomarker discovery for** - Jun 24 2022

web may 3 2021 as a versatile and robust platform protein microarray technology allows researchers to easily profile dysregulated autoantibodies and cytokines associated with autoimmune diseases using various biological specimens mainly serum samples here we summarize the applications of protein microarrays in biomarker discovery for

protein microarray technology assisting personalized medicine in - Feb 18 2022

web jun 12 2019 protein microarray is based on the specific antigen antibody reaction such as any enzyme linked immunosorbent assay the specific reaction occurring on a miniaturized support chip or slide thus having the advantage of simultaneous evaluation of tens to thousands of molecules in small samples with a highly specific recognition for the

**protein microarrays novel developments and applications** - Sep 27 2022

web nov 30 2010 introduction protein microarray technology has made enormous progress in the last decade increasingly becoming an important research tool for the study and detection of proteins protein protein interactions and numerous other biotechnological applications 1 4 the use of protein microarrays has advantages over more traditional

**overview of protein microarrays pubmed** - Apr 03 2023

web protein microarray technology is an emerging field that provides a versatile platform for the characterization of hundreds of thousands of proteins in a highly parallel and high throughput manner protein microarrays are composed

**functional protein microarray technology pubmed** - Oct 29 2022

web functional protein microarrays are emerging as a promising new tool for large scale and high throughput studies in this article we review their applications in basic proteomics research where various types of assays have been developed to probe binding activities to other biomolecules such as proteins dna rna small molecules and glycans

**protein microarray technology how far off is routine diagnostics** - Jul 26 2022

web feb 7 2014 protein microarray technology how far off is routine diagnostics the nature of protein microarray platforms is favorable for multiplexing leading to the development of tools for personalised medicine and highly precise diagnostics
