Emerging Concepts of Tumor Exosome-Mediated Cell-Cell Communication Huang-Ge Zhang,2012-09-06 In multicellular organisms communication between cells involves secretion of proteins that bind to receptors on neighboring cells While this has been well documented another mode of intercellular communication has recently become the subject of increasing interest the release of exosomes In cancer tumor exosomes are involved in various aspects of pathogenesis including proliferation immunosuppression and metastasis Given the ability of exosomes to export unneeded endogenous molecules from cells these structures hold great potential as anticancer therapeutic agents They are also being studied as prognostic markers for cancer

Authored by world renowned clinical laboratory scientists physicians and research scientists Presents the international benchmark for novel analytical approaches in the clinical laboratory Biological Individuality Scott Lidgard,Lynn K Nyhart,2017-05-24 Individuals are things that everybody knows or thinks they do Yet even scholars who practice or analyze the biological sciences often cannot agree on what an individual is and why One reason for this disagreement is that the many important biological individuality concepts serve very different purposes defining classifying or explaining living structure function interaction persistence or evolution Indeed as the contributors to Biological Individuality reveal nature is too messy for simple definitions of this concept organisms too quirky in the diverse ways they reproduce function and interact and human ideas about individuality too fraught with philosophical and historical meaning Bringing together biologists historians and philosophers this book provides a multifaceted exploration of biological individuality that identifies leading and less familiar perceptions of individuality both past and present what they are good for and in what contexts Biological practice and theory recognize individuals at myriad levels of organization from genes to organisms to symbiotic systems We depend on these notions of individuality to address theoretical questions about multilevel natural selection and Darwinian fitness to illuminate empirical questions about development function and ecology to ground philosophical questions about the nature of organisms and causation and to probe historical and cultural circumstances that resonate with parallel questions about the nature of society Charting an interdisciplinary research agenda that broadens the frameworks in which biological individuality is discussed this book makes clear that in the realm of the individual there is not and should not be a direct path from biological paradigms based on model organisms through to philosophical generalization and historical reification *Biomarkers in Cancer Screening and Early Detection* Sudhir Srivastava,2017-06-07 Prepared by world leaders on this topic Biomarkers in Cancer Screening and Early Detection offers a comprehensive state of the art perspective on the various research and clinical aspects of cancer biomarkers from their discovery and development to their validation clinical utility and use in developing personalized cancer treatment Offers a comprehensive state of the art perspective on the various research and clinical aspects of cancer biomarkers Provides immediately actionable information and hopefully also inspiration to move discovery and clinical application forward Offers vital knowledge to help develop personalized cancer treatment for individual patients with specific cancers Tumor Metastasis Ke Xu,2016-09-14 The key aim of the proposed chapter is to provide readers a brief description for the most important parts of the field of circulating tumor cells CTCs the core techniques including negative and positive selection based CTC isolation and the differences between them Most importantly we will also review the clinical applications and important findings in clinical trials The evidence based review will not only help clinicians use CTCs to predict recurrence and foresee the disease related outcomes but also to inspire the researchers in this field to conduct further investigations **Biology of Mesenchymal Stromal Cells -Emerging New Concepts to Improve Function and Scalability** Tokiko Nagamura-Inoue,Willem Fibbe ,Keiya Ozawa,2024-10-28 Human

Searching for Immune Tolerance Manipulating New Molecules and Exploiting New Concepts on Lymphocyte Biology Karina Pino-Lagos,Sergio Quezada,Diego Francisco Catalán,Juan C. Aguillon,2016-07-27 The break on immune tolerance is a common point between autoimmune diseases and the uncontrolled effector immune responses against allo antigens in transplantation Among the past years several approaches to restore a suppressive immune state have included the targeting of co stimulatory inhibitory molecules on immune cells the promotion or blockade of pivotal cytokines and the extensive study on how to isolate and expand suppressive cells with the purpose to re infuse them in patients To date the availability of new technologies has permitted to learn in a more detailed way the immune mechanisms carried out by suppressive lymphocytes together with the identification of new potential candidates to target in our quest for immune tolerance For example the attractive concepts of lymphocyte plasticity and function stability supported by the finding of new transcription factors have opened a new window in the understanding of T cell differentiation effector cell commitment and immune regulatory function On the other hand the discovery of new members of the Ig superfamily ligand VISTA the intriguing role of modulatory molecules like Retinoic Acid Neuropilin 1 Fc gamma receptors or cytokines such as IL 33 among others are revealing new possibilities in the development of new strategies to

conquer our obsession immune tolerance Here we gather the latest information regarding new targets and cellular processes including an update on current cellular therapies and the exciting coming approaches to cure autoimmunity and permit transplant acceptance
