International Gear Conference 2014: 26th-28th August 2014, Lyon Philippe Velez, 2014-09-18 This book presents papers from the International Gear Conference 2014 held in Lyon 26th-28th August 2014. Mechanical transmission components such as gears, rolling element bearings, CVTs, belts and chains are present in every industrial sector and over recent years increasing competitive pressure and environmental concerns have provided an impetus for cleaner, more efficient and quieter units. Moreover, the emergence of relatively new applications such as wind turbines, hybrid transmissions and jet engines has led to even more severe constraints. The main objective of this conference is to provide a forum for the most recent advances addressing the challenges in modern mechanical transmissions. The conference proceedings address all aspects of gear and power transmission technology and range of applications: aerospace, automotive, wind turbine and others, including topical issues such as power losses and efficiency, gear vibrations and noise, lubrication, contact failures, tribodynamics and nano transmissions. A truly international contribution with more than 120 papers from all over the world. A judicious balance between fundamental research and industrial concerns. Participation of the most respected international experts in the field of gearing. A wide range of applications in terms of size, power, speed and industrial sector. The

Engineering Design Primer K. L. Richards, 2020-01-30 Created to support senior level courses/modules in product design. K. L. Richards's Engineering Design Primer reflects the author's deep experience in engineering product management and design. The combination of specific engineering design processes within the broader context of creative team-based product design makes this book the ideal resource for project-based coursework. Starting with design concepts and tasks, the text then explores materials selection, optimisation, reliability, statistics, testing and economic factors, all supported with real-life examples. Student readers will gain a practical perspective of the work they'll be doing as their engineering careers begin. Features: Presents the design development and life cycle management of engineered products. Builds the skills and knowledge needed for students to succeed in their capstone design projects. Brings design concepts alive with practical examples and descriptions. Emphasises the team dynamics needed in engineering practice. Examines probability, reliability, testing and life cycle management of engineered products. *Advanced Engineering and Technology* Lihuan Xie, Dianjian Huang, 2014-03-18 *Advanced Engineering and Technology* contains 110 technical papers from the 2014 Annual Congress on Advanced Engineering and Technology CAET 2014 Hong Kong 19-20 April 2014, including the 4th Workshop on Applied Mechanics and Civil Engineering AMCE 2014. The contributions focus on advanced theories and technologies related to building engineering.

Vibrant Architecture Rachel Armstrong, 2015-08-17 This book sets out the conditions under which the need for a new approach to the production of architecture in the twenty-first century is established, where our homes and cities are facing increasing pressures from environmental challenges that are compromising our lives and well-being. Vibrant architecture embodies a new kind of architectural design practice that explores how lively materials or vibrant matter may be

incorporated into our buildings to confer on them some of the properties of living things such as movement growth sensitivity and self repair The theoretical and practical implications of how this may occur are explored through the application of a new group of materials Characteristically these substances possess some of the properties of living systems but may not have the full status of being truly alive They include forms of chemical artificial life such as dynamic droplets or synthetically produced soils As complex systems they are able to communicate directly with the natural world using a shared language of chemistry and so negotiate their continued survival in a restless world Vibrant architecture may create new opportunities for architectural design practice that venture beyond top down form finding programs by enabling architects to co design in partnership with human and nonhuman collectives which result from the production of post natural landscapes Ultimately vibrant architecture may operate as an ecological platform for human development that augments the liveliness of our planet rather than diminishes it
