Etfе Technology And Design:

ETFE Annette W. LeCuyer, 2008 ETFE foil has recently become an important material for the cladding of technologically sophisticated and innovative buildings. This material is very thin and lightweight and when used in air-filled cushion assemblies has enormous strength and a range of adaptive environmental attributes. ETFE cushion enclosures became known primarily through Grimshaw Architects Eden Project and Herzog de Meuron's Allianz Arena and they are being used on the spectacular swimming stadium for the 2008 Olympic Games in Beijing, the largest ETFE building envelope in the world so far. This book is conceived as an in-depth introduction to the characteristics of ETFE and its applications in construction. Project examples explore in detail the specific characteristics of ETFE building skins in the areas of structural behavior, light transmission, insulation, acoustics, fire engineering, and environmental modification. Sustainable Ecological Engineering Design Mohammad Dastbaz, Chris Gorse, 2016-05-19 This book focuses on the impacts of the built environment and how to predict and measure the benefits and consequences of changes taking place to address sustainability in the development and building industries. It draws together the best treatments of these subjects from the Leeds Sustainability Institute's inaugural International Conference on Sustainability Ecology Engineering Design for Society SEEDS. The focus of discussion is on understanding how buildings and spaces are designed and nurtured to obtain optimal outcomes in energy efficiency and environmental impacts. In addition to examining technical issues such as modeling energy performance, emphasis is placed on the health and well-being of occupants. This holistic approach addresses the interdependence of people with the built and natural environments. The book's contents reflect the interdisciplinary and international collaboration critical to assembly of the knowledge required for positive change. **Routledge Encyclopedia of Technology and the Humanities** Chan Sin-wai, Mak Kin-wah, Leung Sze Ming, 2024-04-29 Routledge Encyclopedia of Technology and the Humanities is a pioneer attempt to introduce a wide range of disciplines in the emerging field of techno-humanities to the English reading world. This book covers topics such as archaeology, cultural heritage, design, fashion, linguistics, music, philosophy, and translation. It has 20 chapters contributed by 26 local and international scholars. Each chapter has its own theme and addresses issues of significant interest in the respective disciplines. References are provided at the end of each chapter for further exploration into the literature of the relevant areas. To facilitate an easy reading of the information presented in this volume, chapters have been arranged according to the alphabetical order of the topics covered. This Encyclopedia will appeal to researchers and professionals in the field of technology and the humanities and can be used by undergraduate and graduate students studying the humanities. Sustainable Facades Ajla Aksamija, 2013-03-27 Practical information on designing sustainable energy-efficient building facades. As energy and other natural resources are being depleted, it has become clear that technologies and strategies that allow us to maintain our satisfaction with interior environments while consuming less of these resources are major objectives of contemporary facade design. Sustainable Facades focuses on the strategies and

approaches for designing sustainable high performance building facades and provides technical guidance for architects and designers This timely and useful guide presents strategies and technical guidelines for designing environmentally sensitive energy efficient facades based on scientific principles It provides climate specific approaches for minimizing energy consumption analyzes the thermal behavior of different facade systems and materials and illustrates with case studies how these approaches have been implemented on architectural projects It also discusses emerging facade technologies materials and systems Topics covered in this unique and indispensable guide include Climate based design approaches for high performance facades Characteristics of sustainable facades energy efficiency thermal behavior and moisture resistance Designing for thermal comfort lighting and glare control and acoustic quality Emerging technologies in facade design including smart materials double skin facades and facades as energy generators Case studies on building orientation and facade design tectonic sun exposure control external shading elements and more *Journal of Contemporary Urban Affairs,*

Constructing Building Enclosures Clifton Fordham, 2020-07-21 *Constructing Building Enclosures* investigates and interrogates tensions that arose between the disciplines of architecture and engineering as they wrestled with technology and building cultures that evolved to deliver structures in the modern era At the center of this history are inventive architects engineers and projects that did not settle for conventional solutions technologies and methods Comprised of thirteen original essays by interdisciplinary scholars this collection offers a critical look at the development and the purpose of building technology within a design framework Through two distinct sections the contributions first challenge notions of the boundaries between architecture engineering and construction The authors then investigate twentieth century building projects exploring technological and aesthetic boundaries of postwar modernism and uncovering lessons relevant to enclosure design that are typically overlooked Projects include Louis Kahn's Weiss House Minoru Yamasaki's Science Center Sigurd Lewerentz's Chapel of Hope and more An important read for students educators and researchers within architectural history construction history building technology and design this volume sets out to disrupt common assumptions of how we understand this history
