Durivage, 2024-09-30 The ASQ Certified Pharmaceutical GMP Professional Handbook assists candidates preparing for the Certified Pharmaceutical Good Manufacturing Practices Professional CPGP examination and serves as a handy reference guide for practitioners in the field. This handbook covers compliance with good manufacturing practices (GMPs) as regulated and guided by national and international agencies for the pharmaceutical industry. Data Integrity and Data Governance

Robert D McDowall, 2018-11-06 Data integrity is the hottest topic in the pharmaceutical industry. Global regulatory agencies have issued guidance after guidance in the past few years, most of which does not offer practical advice on how to implement policies, procedures and processes to ensure integrity. These guidances state what but not how. Additionally, key stages of analysis that impact data integrity are omitted entirely. The aim of this book is to provide practical and detailed help on how to implement data integrity and data governance for regulated analytical laboratories working in or for the pharmaceutical industry. It provides clarification of the regulatory issues and trends and gives practical methods for meeting regulatory requirements and guidance. Using a data integrity model as a basis, the principles of data integrity and data governance are expanded into practical steps for regulated laboratories to implement. The author uses case study examples to illustrate his points and provides instructions for applying the principles of data integrity and data governance to individual laboratory needs. This book is a useful reference for analytical chemists and scientists, management and senior management working in regulated laboratories requiring either an understanding about data integrity or help in implementing practical solutions. Consultants will also benefit from the practical guidance provided. **Data Integrity and Compliance**

José Rodríguez-Pérez, 2019-05-08 Data integrity is a global mandatory requirement for the regulated healthcare industry. It is more than a mere expectation; it's a basic element of good documentation practices, one of the most fundamental pillars of a quality management system. Robustness and accuracy of the data submitted by manufacturers to regulatory authorities when bringing a medical product to market are crucial. The purpose of this book is to consolidate existing data integrity principles and expectations from several regulatory sources, including the U.S. Food and Drug Administration, World Health Organization and European Medicines Agency, into a single and handy document that provides detailed illustrative implementation guidance. It serves as a means of understanding regulatory agencies' position on good data management and

the minimum expectation for how medical product manufacturers can achieve compliance      **Quality Management** Mary Pellettieri, 2015-10-07 Quality management for small regional and national breweries is critical for the success of craft brewing businesses Written for staff who manage quality assurance QA and quality control QC in breweries of all sizes this book clearly sets out how quality management is integrated into every level of operation Author Mary Pellettieri shows how quality management is a concept that encompasses not only the free from defect ethos but combines the wants of the consumer and the art of brewing good beer Breweries must foster a culture of quality where governance and management seamlessly merge policy strategy specifications goals and implementation to execute a QA QC program What tests are necessary knowing that food safety alone does not signify a quality product adhering to good management practice GMP proper care and maintenance of assets standard operating procedures training and investment in staff and more must be considered together if a quality culture is to translate into success The people working at a brewery are the heart of any quality program Management must communicate clearly the need for quality management delineate roles and responsibilities and properly train and assess staff members Specialist resources such as a brewery laboratory are necessary if an owner wants to be serious about developing standard methods of analysis to maintain true to brand specifications and ensure problems are identified before product quality suffers Staff must know the importance of taking corrective action and have the confidence to make the decision and implement it in a timely fashion With so many processes and moving parts a structured problem solving program is a key part of any brewery's quality program How should you structure your brewing lab so it can grow with your business What chemical and microbiological tests are appropriate and effective How are new brands incorporated into production How do you build a sensory panel that stays alert to potential drifts in brand quality Which FDA and TTB regulations affect your brewery in terms of traceability and GMP Can you conduct and pass an audit of your processes and products Mary Pellettieri provides answers to these key organizational logistical and regulatory considerations      The Certified Pharmaceutical GMP Professional Handbook, Second Edition Mark Allen

Durivage, 2016-05-26 The purpose of this handbook is to assist individuals for the Certified Pharmaceutical Good Manufacturing Practices Professional CPGP examination and provide a reference for the practitioner The second edition reflects the Body of Knowledge which was updated in 2015 This edition has also incorporated additional information including updated references The updates reflect the current trends and expectations of the evolving pharmaceutical industry driven by consumer expectations and regulatory oversight This handbook covers compliance with good manufacturing practices GMPs as regulated and guided by national and international agencies for the pharmaceutical industry It covers finished human and veterinary drugs and biologics and combination devices as well as their component raw materials including active pharmaceutical ingredients APIs and excipients and packaging and labeling operations
