service guarantees with multiple classes of service. Acquire practical design and implementation knowledge of real world MPLS VPNs, TE and QoS through case studies and configuration examples. Multiprotocol Label Switching (MPLS) is a highly scalable, high performance forwarding technology that has multiple applications in the service provider and enterprise environment. This book is intended for internetwork engineers and administrators who are responsible for designing, implementing and supporting service provider or enterprise MPLS backbone networks. It contains a broad range of technical details on MPLS and its associated protocols: packet based MPLS, ATM based MPLS, MPLS traffic engineering, MPLS QoS, MPLS design and advanced MPLS architectures. This book contains MPLS theory, design, configuration and various case studies. Use this book as a reference and guide for designing, implementing and supporting an MPLS network. Even if you are not using Cisco routers, this book can increase your awareness and understanding of MPLS technology as well as provide you with detailed design concepts and rules for building scalable MPLS networks. **Advanced MPLS Design and Implementation** is your guide to understanding, designing and implementing MPLS VPNs, WAN switched MPLS VPNs, MPLS traffic engineering and MPLS QoS. **Traffic Engineering with MPLS** Eric D. Osborne, Ajay Simha, 2002. Design, configure and manage MPLS TE to optimize network performance. Almost every busy network backbone has some congested links while others remain underutilized. That's because shortest path routing protocols send traffic down the path that is shortest without considering other network parameters such as utilization and traffic demands. Using Traffic Engineering (TE) network operators can redistribute packet flows to attain more uniform distribution across all links. Forcing traffic onto specific pathways allows you to get the most out of your existing network capacity while making it easier to deliver consistent service levels to customers at the same time. Cisco's Multiprotocol Label Switching (MPLS) lends efficiency to very large networks and is the most effective way to implement TE. MPLS TE routes traffic flows across the network by aligning resources required by a given flow with actual backbone capacity and topology. This constraint based routing approach feeds the network route traffic down one or more pathways, preventing unexpected congestion and enabling recovery from link or node failures. **Traffic Engineering with MPLS** provides you with information on how to use MPLS TE and associated features to maximize network bandwidth. This book focuses on real world applications from design scenarios to feature configurations to tools that can be used in managing and troubleshooting MPLS TE. Assuming some familiarity with basic label operations, this guide focuses mainly on the operational aspects of MPLS TE: how the various pieces work and how to configure and troubleshoot them. Additionally, this book addresses design and scalability issues along with extensive deployment tips to help you roll out MPLS TE on your own network. Understand the background of TE and MPLS and brush up on MPLS forwarding basics. Learn about router information distribution and how to bring up MPLS TE tunnels in a network. Understand MPLS TE's Constrained Shortest Path First (CSPF) and mechanisms you can use to influence CSPF's path calculation. Use the Resource Reservation Protocol (RSVP) to implement Label Switched Path (LSP) setup. Use various mechanisms to forward traffic down a tunnel. Integrate

MPLS into the IP quality of service QoS spectrum of services Utilize Fast Reroute FRR to mitigate packet loss associated with link and node failures Understand Simple Network Management Protocol SNMP based measurement and accounting services that are available for MPLS Evaluate design scenarios for scalable MPLS TE deployments Manage MPLS TE networks by examining common configuration mistakes and utilizing tools for troubleshooting MPLS TE problems Eric and Ajay work in the development group at Cisco that built Traffic Engineering They are among those with the greatest hands on experience with this application This book is the product of their experience George Swallow Cisco Systems Architect for Traffic Engineering Co Chair IETF MPLS Working Group Eric Osborne CCIE r 4122 has been doing Internet engineering of one sort or another since 1995 He joined Cisco in 1998 to work in the Cisco Technical Assistance Center TAC moved from there to the ISP Expert team and then to the MPLS Deployment team He has been involved in MPLS since the Cisco IOS r Software Release 11 1CT days Ajay Simha CCIE 2970 joined the Cisco TAC in 1996 He then went on to support tier 1 and 2 ISPs as part of Cisco s ISP Expert team Ajay has been working as an MPLS deployment engineer since October 1999 and he has first hand experience in troubleshooting designing and deploying MPLS

Definitive MPLS Network Designs Jim Guichard, François Le Faucheur, Jean-Philippe Vasseur, 2005-03-14 Field proven MPLS designs covering MPLS VPNs pseudowire QoS traffic engineering IPv6 network recovery and multicast Understand technology applications in various service provider and enterprise topologies via detailed design studies Benefit from the authors vast experience in MPLS network deployment and protocol design Visualize real world solutions through clear detailed illustrations Design studies cover various operator profiles including an interexchange carrier IXC a national telco deploying a multiservice backbone carrying Internet and IP VPN services as well as national telephony traffic an international service provider with many POPs all around the globe and a large enterprise relying on Layer 3 VPN services to control communications within and across subsidiaries Design studies are thoroughly explained through detailed text sample configurations and network diagrams Definitive MPLS Network Designs provides examples of how to combine key technologies at the heart of IP MPLS networks Techniques are presented through a set of comprehensive design studies

Each design study is based on characteristics and objectives common to a given profile of network operators having deployed MPLS and discusses all the corresponding design aspects. The book starts with a technology refresher for each of the technologies involved in the design studies. Next a series of design studies is presented each based on a specific hypothetical network representative of service provider and enterprise networks running MPLS. Each design study chapter delivers four elements. They open with a description of the network environment including the set of supported services, the network topology, the POP structure, the transmission facilities, the basic IP routing design and possible constraints. Then the chapters present design objectives such as optimizing bandwidth usage. Following these are details of all aspects of the network design covering VPN, QoS, TE, network recovery and where applicable multicast, IPv6 and pseudowire. The chapters conclude with a summary of the lessons that can be drawn from the design study so that all types of service providers and large enterprise MPLS architects can adapt aspects of the design solution to their unique network environment and objectives. Although network architects have many resources for seeking information on the concepts and protocols involved with MPLS, there is no single resource that illustrates how to design a network that optimizes their benefits for a specific operating environment. The variety of network environments and requirements makes it difficult to provide a one size fits all design recommendation. *Definitive MPLS Network Designs* fills this void. This book comes as a boon to professionals who want to understand the power of MPLS and make full use of it. Parantap Lahiri, Manager IP Network Infrastructure Engineering, MCI. Includes a FREE 45 Day Online Edition. This book is part of the Networking Technology Series from Cisco Press which offers networking professionals valuable information for constructing efficient networks, understanding new technologies and building successful careers.
