*Highly complex syllable structure: A typological and diachronic study* Shelece Easterday,2019-11-13 The syllable is a  
natural unit of organization in spoken language whose strongest cross linguistic patterns are often explained in terms of a  
universal preference for the CV structure Syllable patterns involving long sequences of consonants are both typologically  
rare and theoretically marginalized with few approaches treating these as natural or unproblematic structures This book is  
an investigation of the properties of languages with highly complex syllable patterns The two aims are i to establish whether  
these languages share other linguistic features in common such that they constitute a distinct linguistic type and ii to identify  
possible diachronic paths and natural mechanisms by which these patterns come about in the history of a language These  
issues are investigated in a diversified sample of 100 languages 25 of which have highly complex syllable patterns Languages  
with highly complex syllable structure are characterized by a number of phonetic phonological and morphological features  
which serve to set them apart from languages with simpler syllable patterns These include specific segmental and  
suprasegmental properties a higher prevalence of vowel reduction processes with extreme outcomes and higher average  
morpheme word ratios The results suggest that highly complex syllable structure is a linguistic type distinct from but sharing  
some characteristics with other proposed holistic phonological types including stress timed and consonantal languages The  
results point to word stress and specific patterns of gestural organization as playing important roles in the diachronic  
development of these patterns out of simpler syllable structures The Code of Federal Regulations of the United States of  
America ,2000 The Code of Federal Regulations is the codification of the general and permanent rules published in the
