God Created The Integers The Mathematical Breakthroughs That Changed History:

God Created The Integers Stephen Hawking, 2007-10-09 Looks at landmark mathematical discoveries over the past 2500 years by such mathematicians as Euclid Isaac Newton Pierre Simon de Laplace Georg Cantor Alan Turing and others offering profiles of twenty one important mathematical masters facsimiles of their key works and commentary on their contributions to the history of mathematics The Mathematical Mind of F. M. Dostoevsky Michael

Marsh-Soloway, 2024-11-19 The Mathematical Mind of F M Dostoevsky Imaginary Numbers Non Euclidean Geometry and Infinity reconstructs the curriculum and readings that F M Dostoevsky encountered during his studies and connects such sources to the mathematical references and themes in his published works Prior to becoming a man of letters Dostoevsky studied at the Main Engineering School in St Petersburg from 1838 to 1843 After he was arrested submitted to mock execution by firing squad and sentenced to penal servitude in Siberia for his involvement in the revolutionary Petrashevsky Circle in 1849 most of his books and journals from the period of his education were confiscated and destroyed by the Third Section of the Russian Secret Police Although most scholars discount the legacy of his engineering studies the literary aesthetics of his works communicate an acute awareness of mathematical principles and debates This book unearths subtexts in works by Dostoevsky communicating veins of mathematical thought that evolved throughout Classical Antiquity the Renaissance and the Scientific Revolution *Stephen Hawking* Joel Levy, 2021-07-15 Physicist Stephen Hawking was a scientist for the modern age He is as renowned for his theories on time and space as he is for his unique life story Undeterred by a debilitating illness he trained his mind to work in a new way to become the leading light in modern science This carefully researched biography tells Hawking's story highlighting his scientific breakthroughs and how despite his struggle with a degenerative condition he became the most celebrated and inspiring scientist of his generation A beautiful design includes striking photographs illuminating documents and helpful sidebars that cast light on Hawking's intellectual achievements **Images of Mathematics Viewed Through Number, Algebra, and Geometry** Robert G. Bill, 2014-07-31

Mathematics is often seen only as a tool for science engineering and other quantitative disciplines Lost in the focus on the tools are the intricate interconnecting patterns of logic and ingenious methods of representation discovered over millennia which form the broader themes of the subject This book building from the basics of numbers algebra and geometry provides sufficient background to make these themes accessible to those not specializing in mathematics The various topics are also covered within the historical context of their development and include such great innovators as Euclid Descartes Newton Cauchy Gauss Lobachevsky Riemann Cantor and Gdel whose contributions would shape the directions that mathematics would take The detailed explanations of all subject matter along with extensive references are provided with the goal of allowing readers an entre to a lifetime of the unique pleasures of mathematics Topics include the axiomatic development of number systems and their algebraic rules the role of infinity in the real and transfinite numbers logic and the axiomatic path

from traditional to nonEuclidean geometries The themes of algebra and geometry are then brought together through the concepts of analytic geometry and functions With this background more advanced topics are introduced sequences vectors tensors matrices calculus set theory and topology Drawing the common themes of this book together the final chapter discusses the struggle over the meaning of mathematics in the twentieth century and provides a meditation on its success

Einstein's Genius Club Burton Feldman,2011-09-01 As World War II wound down and it became increasingly clear that the Allies would emerge victorious Albert Einstein invited three close friends all titans of contemporary science and philosophy to his home at 112 Mercer Street in Princeton New Jersey to discuss what they loved best science and philosophy His guests were the legendary philosopher and pacifist Bertrand Russell the boy wonder of quantum physics Wolfgang Pauli and the brilliant logician Kurt G del Their casual meetings took place far from the horrific battlefields of the war and the then secret lair of experimental atomic physicists in Los Alamos New Mexico Using these historic meetings as his launching pad Feldman sketches the lives and contributions of the four friends colleagues and rivals especially Einstein innately self confident but frustrated in his attempt to come up with a unified theory and the aristocratic but self doubting Lord Russell Masterfully researched this book accessibly illuminates the feelings of these notable men about the world of science that was then beginning to pass them by and about the dawning atomic age that terrified them all Tales of Some Extraordinary men and women who shaped History Dr. V.K. Muthu,2021 This book deals with men and women of historical importance who have played crucial roles in shaping the destiny of various nations and the world It narrates stories of not only the greatest achievements in science culture and health but also of historical blunders in terms of regional as well as world wars Tales of men who fought fearlessly in pursuit of land and wealth may be intriguing to the present generation While the stories of great warriors like Alexander Akbar and Napoleon may throw light on the dark side of history the realisation of the folly of war by Asoka after the Kalinga war may instil some ray of hope in the youth Stories of giants like Isaac Newton and Albert Einstein may inspire not only the young scientists but everyone to explore nature and space Sacrifices made by committed doctors of yester years who dedicated their lives to learn about the causes of diseases and their transmission and who thus saved millions of people from dreaded diseases like small pox and yellow fever may be a revelation for many The fact that many of those scientists and medics were able to achieve these in spite of their poverty and the existing social taboos is a testimony to their dedication and grit The achievements of Mary Curie who fought against rampant gender bias is worth emulating The story of scientists like Archimedes who was killed in his study by war mongering rulers may induce a sense of sorrow and anger among the readers The readers may realize that the artistic achievements of Leonardo da Vinci well known for his creation Mona Lisa are to be cherished for ever The story of the great navigators Columbus and Vasco da Gama conquering the oceans in search of new world and wealth may be thrilling to lovers of adventure and exploration The fact that great souls like Mahatma Gandhi Babasaheb Ambedkar Martin Luther King Jr and Mother Teresa have inspired millions

of poor and helped the oppressed is an endearing story to be learnt by all **Unifying Themes in Complex Systems X**

Clegg, 2018-04-17 Notwithstanding the mythical demise of introspection self observation has always been an integral aspect of the social sciences In the century following the behavioral revolution psychology has seen a reduction not so much in the frequency as in the rigor with which self observation is practiced A great deal of self observation has been renamed or obscured as for example self report but this has served only to defer and impoverish important theoretical and technical work This volume which contributes to the development of a rigorous theory of self observation is organized around three general objectives to re animate a discourse on self observation through a historical analysis of various self observation traditions to outline and begin to address some of the unique theoretical challenges of self observation and to elaborate some of the technical and practical details necessary for realizing a program of research dedicated to self observation In the first section of the book three historians of psychology trace the evolution of self observation In the second three scholars who are currently working in contemporary traditions of self observation discuss the basic theoretical and practical challenges involved in conducting self observation research In the final two sections of the book scholars from the phenomenological and narrative traditions trace the history theory and practice of self observation in their respective traditions Self Observation in the Social Sciences continues the fine tradition set by Transaction s History and Theory of Psychology series edited by Jaan Valsiner It is of interest to psychologists and to those who study methodology within the social sciences

The Big Bang Richard Tyson, 2025-01-21 The Big Bang Theory was first presented by Georges Lemaitre in the December 1932 Popular Science issue George Gamow is most known for his 1948 creation of the Big Bang Theory in which he noted the belief that every single thing in the universe began as a high density state of unknown reason Currently there are a number of books titled The Big Bang and Before the Big Bang Presented herein is an insightful theory revision of The Big Bang which brought forth the birth of the universe within the dark and cold unbounded realms of solar space Revised theory includes an envisioned concept of solar space and universe expansion rate Also commentary on UFOs and extraterrestrials cyclical solar crunch and other events is presented There is no way that a big crunch will ever occur Solar space extends forever with no boundary The universe will continue to be pulled into the vacuum of space forever as the universe continues to become less dense Less density results in diminishing gravitational attraction between galaxies resulting in a big crunch less likely Albert Einstein in 1931 theorized that there was a universe before the Big Bang which ended in a Big Crunch which created a new Big Bang every trillion years *Models and Inferences in Science* Emiliano Ippoliti, Fabio Sterpetti, Tom Nickles, 2016-01-27 The book answers long standing questions on scientific modeling and inference across multiple perspectives and disciplines including logic mathematics physics and medicine The different chapters cover a variety of issues such as the role models play in scientific practice the way science shapes our concept of models ways of modeling the pursuit of scientific knowledge the relationship between our concept of models and our concept of science The book also discusses models and scientific explanations models in the semantic view of theories the applicability of mathematical models to the real world and their effectiveness the links between models and inferences and models as a means for acquiring new knowledge It analyzes different examples of models in physics biology mathematics and engineering Written for researchers and graduate students it provides a cross disciplinary reference guide to the notion and the use of models and inferences in science **Coding,**

Shaping, Making Haresh Lalvani, 2023-01-31 Coding Shaping Making combines inspiration from architecture mathematics biology chemistry physics and computation to look towards the future of architecture design and art It presents ongoing experiments in the search for fundamental principles of form and form making in nature so that we can better inform our own built environment In the coming decades matter will become encoded with shape information so that it shapes itself as happens in biology Physical objects shaped by forces as well will begin to design themselves based on information encoded in matter they are made of This knowledge will be scaled and trickled up to architecture Consequently architecture will begin to design itself and the role of the architect will need redefining This heavily illustrated book highlights Haresh Lalvani's efforts towards this speculative future through experiments in form and form making including his work in developing a new approach to shape coding exploring higher dimensional geometry for designing physical structures and organizing form in higher dimensional diagrams Taking an in depth look at Lalvani's pioneering experiments of mass customization in industrial products in architecture combined with his idea of a form continuum this book argues for the need for integration of coding shaping and making in future technologies into one seamless process Drawing together decades of research this book will be a thought provoking read for architecture professionals and students especially those interested in the future of the discipline as it relates to mathematics science technology and art It will also interest those in the latter fields for its broader implications
