This book presents a nice Graphical User Interface based approach for solving electrical power system fault analysis problems MATLAB flagship software for scientific and engineering computation is used for this purpose Examples and problems from various widely used textbooks of power system are taken as reference so that results can be compared This takes into account the fresh students having no idea about the course and can alone be used as a textbook Help file is also provided with every module of the software keeping in mind that the software can be used as alternative to any textbook It has been prepared for anyone who has little or no exposure to MATLAB The programs were written in MATLAB 6 and are made compatible with most releases of MATLAB The purpose of this book is to develop a fundamental idea about the power system fault analysis among the undergrads so that they can develop their own skills and aptitudes for solving real world power engineering fault analysis problems Undergraduate students in electrical engineering having background of electrical machines and matrix algebra who are interested in power system analysis are encouraged to take a look An Integrated Approach to Home Security and Safety Systems Sonali Goyal,Neera Batra,N. K. Batra,2021-10-14 This book provides an integrated solution for security and safety in the home covering both assistance in health monitoring and safety from strangers intruders who want to enter the home with harmful intentions It defines a system whereby recognition of a person stranger at the door is done using three modules Face Recognition Voice Recognition and Similarity Index These three modules are taken together to provide a percentage likelihood that the individual is in the known or unknown category The system can also continuously monitor the health parameters of a vulnerable person living alone at home and aid them in calling for help in an emergency The authors have analyzed a number of existing biometric techniques to provide security for an individual living alone at home These biometric techniques have been tested using MATLAB image processing and signal processing toolboxes and results have been calculated on the basis of recognition rate A major contribution in providing security is a hybrid algorithm proposed by the author named PICA which combines features of both PCA Principle Component Analysis and ICA Independent Component Analysis algorithms This hybrid approach gives better performance recognition than either system alone The second proposed hybrid algorithm for voice recognition is named as a MFRASTA algorithm by combining features of MFCC Mel Frequency Cepstral Coefficient and RASTA PLP RelAtive SpecTrA Perceptual Linear Prediction algorithm After performing experiments results are collected on the basis of recognition rate The authors have also proposed a third technique named as a Similarity Index to provide trust based security for an individual This technique is text independent in which a person is recognized by pronunciation frequency tone pitch etc irrespective of the content spoken by the person By combining these three techniques a high recognition rate is provided to the person at the door and high security to the individual living independently at home In the final contribution the authors have proposed a fingertip based application for health monitoring by using the concept of sensors This application is developed using iPhone 6

s camera When a person puts their fingertip on a camera lens with the help of brightness of the skin the person s heartbeat will be monitored This is possible even with a low quality camera In case of any emergency text messages will be sent to the family members of the individual living alone by using 3G Dongle and MATLAB tool Results show that the proposed work outperforms all the existing techniques used in face recognition voice recognition and health monitoring alone Building Bioinformatics Solutions Conrad Bessant,Darren Oakley,Ian Shadforth,2014-01-16 Bioinformatics encompasses a broad and ever changing range of activities involved with the management and analysis of data from molecular biology experiments Despite the diversity of activities and applications the basic methodology and core tools needed to tackle bioinformatics problems is common to many projects This unique book provides an invaluable introduction to three of the main tools used in the development of bioinformatics software Perl R and MySQL and explains how these can be used together to tackle the complex data driven challenges that typify modern biology These industry standard open source tools form the core of many bioinformatics projects both in academia and industry The methodologies introduced are platform independent and all the examples that feature have been tested on Windows Linux and Mac OS Building Bioinformatics Solutions is suitable for graduate students and researchers in the life sciences who wish to automate analyses or create their own databases and web based tools No prior knowledge of software development is assumed Having worked through the book the reader should have the necessary core skills to develop computational solutions for their specific research programmes The book will also help the reader overcome the inertia associated with penetrating this field and provide them with the confidence and understanding required to go on to develop more advanced bioinformatics skills From Nano to Space Michael Breitner,Georg Denk,Peter Rentrop,2007-11-04 This book shows how modern Applied Mathematics influences everyday life It features contributors from universities research institutions and industry who combine research and review papers to present a survey of current research More than 20 contributions are divided into scales nano micro macro space and real life In addition coverage includes engaging and informative case studies as well as complex graphics and illustrations many of them in color *Tools and Applications with Artificial Intelligence* Constantinos Koutsojannis,Spiros Sirmakessis,2009-01-17 In recent years the use of Artificial Intelligence AI techniques has been greatly increased The term intelligence seems to be a must in a large number of European and International project calls AI Techniques have been used in almost any domain Application oriented systems usually incorporate some kind of intelligence by using techniques stemming from intelligent search knowledge representation machine learning knowledge discovery intelligent agents computational intelligence etc The Workshop on Applications with Artificial Intelligence seeks for quality papers on computer applications that incorporate some kind of AI technique The objective of the workshop was to bring together scientists engineers and practitioners who work on designing or developing applications that use intelligent techniques or work on intelligent techniques and apply them to application domains like medicine biology education etc to present and discuss their research works and exchange
