Solutions

Answers to Review Questions

1. An entity is a person, place, thing, or event.
2. An attribute is a property of an entity.
3. A relationship is an association between tables (entities). A one-to-many relationship between two tables is a relationship in which each row in the first table can be associated with many rows in the second table, but each row in the second table is associated with only one row in the first table.
4. A repeating group is multiple entries in a single location in a table.
5. A relation is a two-dimensional table in which the entries in the table are single-valued (each location in the table contains a single entry), each column has a distinct name (or attribute name), all values in a column are values of the same attribute, the order of the rows and columns is immaterial, and each row contains unique values.
6. A relational database is a collection of relations.
7. For each table, you write the name of the table and then within parentheses list all of the columns in the table. Underline the primary keys.

```
BRANCH (BRANCH_NUM, BRANCH_NAME, BRANCH_LOCATION, NUM_EMPLOYEES)
PUBLISHER (PUBLISHER_CODE, PUBLISHER_NAME, CITY)
AUTHOR (AUTHOR_NUM, AUTHOR_LAST, AUTHOR_FIRST)
BOOK (BOOK_CODE, TITLE, PUBLISHER_CODE, TYPE, PRICE, PAPERBACK)
WROTE (BOOK_CODE, AUTHOR_NUM, SEQUENCE)
INVENTORY (BOOK_CODE, BRANCH_NUM, ON_HAND)
```

8. To qualify the name of a field, indicate the table in which the field appears. You do this by preceding the name of the field with the name of the table and a period.
9. A column (attribute), B, is functionally dependent on another column, A (or possibly a collection of columns), if at any point in time a value for A determines a single value for B.
10. Column A (or a collection of columns) is the primary key for a table if (1) *All* columns in the table are functionally dependent on A and (2) No subcollection of the columns in A (assuming A is a collection of columns and not just a single column) also has property 1. The primary key of the BRANCH table is the BRANCH_NUM column. The primary key of the PUBLISHER table is the PUBLISHER_CODE column. The primary key of the AUTHOR table is the AUTHOR_NUM column. The primary key of the BOOK table is the BOOK_CODE column. The primary key of the WROTE table is the combination of the BOOK_CODE and AUTHOR_NUM
